02 INTRODUCTION

Introduction

This phase specific Site Based Management Plan (SBMP) has been prepared for Village 15 (V15) of Springfield Rise at Spring Mountain Estate and incorporates the management intent, objectives and specifications detailed within the overarching environmental management plans prepared for the development.

The aim of this SMBP-V15 is to set out and guide the implementation of effective measures to ameliorate any impacts, and to ensure and manage the long term sustainability of the project and its natural environment, specifically for Matters of National Environmental Significance (MNES) listed species known to occur within the Spring Mountain project site namely:

- Phascolarctos cinereus (Koala)
- Pteropus poliocephalus (Grey-headed Flying-fox)
- Plectranthus habrophyllus

The document has been developed in accordance with the Spring Mountain SMBP, prepared by Yurrah, as an updated and re-issued phase specific management plan.

The purpose of this SBMP-V15 is to provide a single, consolidated management document which incorporates requirements of numerous ecological management plans prepared for Spring Mountain. From these documents, this SBMP-V15 extracts management objectives, implementation requirements, performance indicators and monitoring and auditing actions relevant to the specific the development of V15 for both construction and operational phases.

Environmental Pre-Start Checklist

This Site Based Management Plan has been prepared to create an on-site working document with easy to find references to management measures without the comprehensive details of the assessment and approval. Core to contractors working under this SBMP is completion of the Spring Mountain Pre-Start Environmental Checklist. Completion and sign off of this checklist, inclusive of attachments should will warrant compliance with this SBMP and broader approval parameters.

This phase specific Site Based Management Plan (SBMP) Details on this SBMP-V15 can be found within the following has been prepared for Village 15 (V15) of Springfield Rise at documents:

- Site Based Management Plan for Spring Mountain Community, prepared by Yurrah (July 2015)
- Threatened Flora Management Plan for Spring Mountain, prepared by **Yurrah** (July 2015)
- Fauna Management Plan for Spring Mountain, prepared by Saunders Havill Group (July 2015)
- Code of practice for Welfare of Animals effected by Land Clearing and Other Habitat Impacts, and Wildlife/ Spotter Catchers (Draft) prepared by Wildlife Warriors and Voiceless (2009)
- Offsets Management Plan prepared for Spring Mountain, prepared by Saunders Havill Group (July 2015)
- Bushfire Management Plan for Spring Mountain, prepared by Cardno (2016)

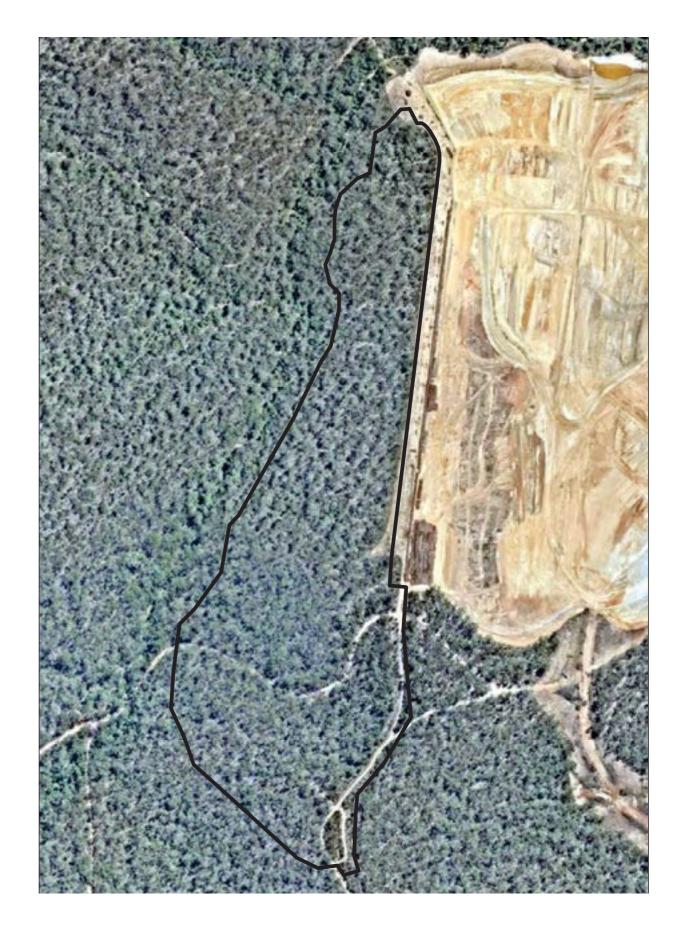

This SBMP-V15 should also be read in conjunction with all V15 approvals and conditions including approved civil, landscape, vegetation management and rehabilitation plans and specifications.

This SBMP-V15 has also been prepared to meet compliance and auditing requirements of the Spring Mountain Commonwealth Department of the Environment (DoE) approval under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC) (Ref: 2013/7057), specifically Conditions 3-6.

This SBMP-V15 outlines construction measures specific to V15 to manage of impacts to native flora and fauna.

Construction

- Vegetation Management (Clearing & Protection)
- Protection of MNES Fauna (Koala and Grey-headed Flying Fox) and Native Wildlife
- Maintenance of Safe Wildlife Movement Opportunities
- Fauna Habitat Rehabilitation
- Threatened Flora Management
- Pest Management
- Fire Management
- Education and Awareness

03 SITE DESCRIPTION

Site Description

V15 is located in the western portion of the precinct with the western boundary defined by the linear open space of the Town Centre West Gully corridor and the conservation land at the southern portion. Village 15 has a development area of approximately 19ha.

Natural Features

V15 comprises land characteristics by the ridgeline defining its eastern boundary, receding towards the linear open space at its western boundary. The southern portions of the precinct exhibit a more undulating form between subtle ridges and gullies into the linear open space of the adjoining Conservation Land.

Land Use

V13 will be developed for typical residential development predominately comprising a range of low rise (1-2 storey) detached dwelling forms. It is proposed that an overall density of 18/20dw/ha will be achieved.

Interface with Linear Open Space

The interface with Linear Open Space along the western boundary of the village is to be provided as per PSP3 unless otherwise approved.

Interface with Conservation Land

The interface with the Conservation Land will require consideration of bushfire mitigation.

Photo: Plectranthus habrophyllus (listed as Endangered under EPBC Act (Cth))

Photo: Koala (listed as Vulnerable under EPBC Act (Cth) and NCA (Qld))

Extract: V15 and surrounding development site from the Spring Mountain Precinct Plan

04 ECOLOGICAL VALUES - SUMMARY

Ecological Values

Numerous ecological surveys were undertaken over the site as part broader concept planning for the Spring Mountain project. In addition, pre-clearance flora and fauna surveys for V15 were undertaken by Saunders Havill Group and Queensland Fauna Consultants, respectively. The following comments summarise the ecological values of the V15 site:

- The majority of V15 is mapped as containing vegetation comprised of composite Of Concern RE12.9-10.2/12.9-10.7/12.9-10.19 with the western boundary waterway mapped as containing Least Concern RE12.9-10.17a.
- Species recorded within the canopy are dominated by Corymbia citriodora (Spotted Gum), and Eucalyptus siderophloia (Grey Ironbark). Subspecies include scattered Corymbia henryi (Large Leaf Spotted Gum), and Eucalyptus seeana (Narrow Leaf Red Gum),
- The mapped waterway is highly infested with weeds, particularly Lantana camara (Lantana) however also retains an increased density of Lophostemon suaveolens (Swamp Box) and a number of scattered Eucalyptus tereticornis (Forest Red Gum) specimens. The area containing Lantana camara contained very few native flora species within the ground layer.
- The ridgelines and slopes within the assessment area contained a mix of Corymbia and Eucalypt species with patches of dense understorey of Acacia species, particularly Acacia leiocalyx (Early Flowering Black Wattle). These increased densities appeared to be a result of past intensive fire periods.
- Rock outcrops were observed along this ridgeline running north south and were targeted during the field the survey due to these areas being preferred habitat for a number of the listed flora species including Plectranthus harbrophyllus (Plectranthus) and Marsdenia coronata (Slender Milk Vine)...
- No State or Commonwealth threatened flora or fauna species were identified within V15 as part of historical and pre-clear surveys.

Photo: Waterway areas dominated by dense Lantana camara (Lantana)

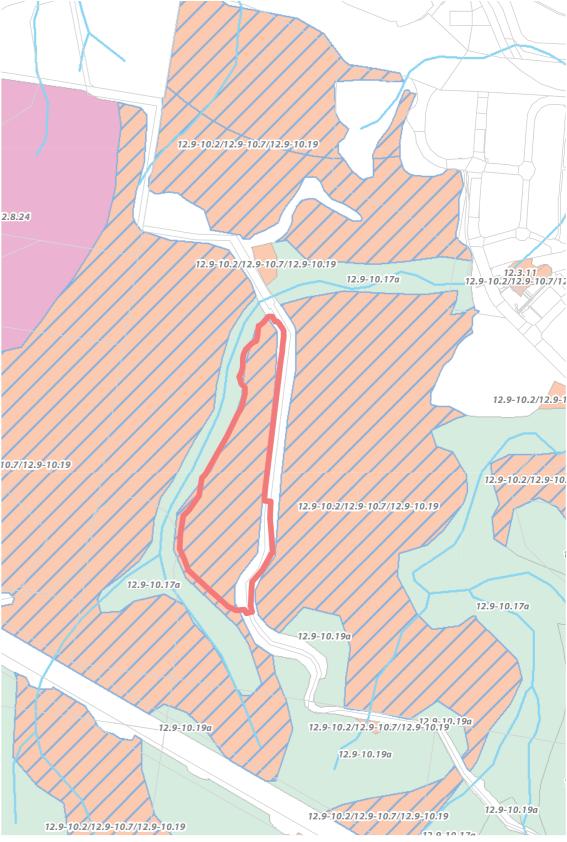

Regional Ecosystem Descriptions

Least Concern RE12.9- 10.17a	<u>Lophostemon confertus</u> or <u>Lophostemon suaveolens</u> dominated open forest usually <u>withemergent</u> Eucalyptus and/or <u>Corymbia</u> species. Occurs in gullies and southern slopes on Cainozoic and Mesozoic sediments.
Least	Corymbia henryi +/- Eucalyptus fibrosa subsp. Fibrosa,
Concern	Corymbia citriodora subsp. Variegate, Eucalyptus
RE 12.9-	<u>siderophloia</u> , Eucalyptus <u>crebra</u> open forest. Occurs in
10.19a	coastal areas on Cainozoic and Mesozoic sediments.
Least	Corymbia citriodora subsp. Variegate open forest or
Concern	woodland usually with Eucalyptus crebra. Other species
RE 12.9-	such as Eucalyptus tereticornis, Eucalyptus moluccana,
10.2	Eucalyptus acmenoides and Eucalyptus siderophloia
	may be present in scattered patches or in low densities.
	Understorey can be grassy or shrubby. Shrubby
	understorey of Lophostemon confertus (whipstick form)
	often present in northern parts of bioregion. Occurs on
	Cainozoic and Mesozoic sediments.
Of	Eucalyptus crebra +/- Eucalyptus tereticornis, Corymbia
Concern	tessellaris, Angophora leiocarpa, Eucalyptus
RE 12.9-	melanophloia woodland. Occurs on Cainozoic and

Mesozoic sediments.

Photo: Rock outcrops within the ridgeline areas observed along western facing slope.

Extract: Regional Ecosystem Mapping

05 ENVIRONMENTAL MANAGEMENT

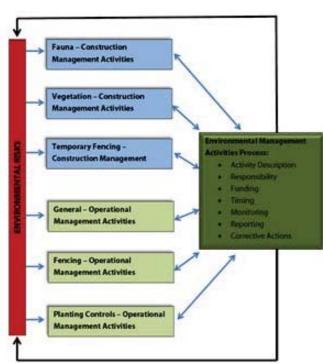

Management - General

This SMBP–V15 sequences through details on a number of site specific outcomes for fauna, vegetation management and operational controls associated with the development of V15. Logically, the document works through construction processes and has been prepared as a sub-plan to the SBMP for Spring Mountain prepared by Yurrah.

Environmental Training

This SBMP-V15 is to be issued to all site contractors (and sub-contractors) and kept within site construction offices. Elements of compliance with the document will form part of the responsibility of the Principle Site Contractor. Training on the management measures outcomes in this SBMP-V15 will occur as part of the broader site environmental management and workplace health and safety procedures. This will include the following steps:

- 1. Copy of the SBMP-V15 made available to all site contractors (and subcontractors)
- 2. Outline of the SBMP-V15 and its requirement relative to the site and / or particular scope of a contract forming part of the site induction requires contractors to read, acknowledge and sign the document prior to commencement of site works.
- 3. Requirements of the SBMP-V15 to be incorporated into workplace checklists, work method statements and toolbox talks.
- 4. Weekly review and report on compliance with the SBMP by the Principle Contractor.

Spring Mountain Risk Management Process

Adaptive Management

Adaptive management refers to a way of managing natural resources where management actions are regularly revised and, if necessary, modified based on monitored changes in environmental condition and/or changes in base knowledge which underpins the original management approach. This SBMP-V15 has been based on, as far as practical, the current state of knowledge of the species ecology and best practice habitat management approaches. When new facts emerge from future research, they should be immediately integrated into the plan so it remains consistent with the current state of knowledge (and best practice).

Statutory Requirements

Activities associated with this SBMP will comply with the relevant provisions of legislation and regulations and policies of the following:

- Environment Protection and Biodiversity Conservation Act 1999 (Cth) with regard to species listed under the provisions of this Act;
- Nature Conservation Act 1992 (Qld) with regard to species listed under the provisions of this Act;
- Biosecurity Act 2014 (Qld) with regard to weeds and pests; and
- The requirements of the Commonwealth, State and /or Local Government decision notices including any relevant "conditions of approval".

Roles and Responsibilities

Proponent	Lendlease Communities Pty Ltd	<u>Lendlease</u> Communities Pty Ltd Contact: Graeme Knox
Contractor	Appointed party or company that performs the construction works on site and included all employees of the Contractor and sub-contractors.	Shadforth Civil Contact: Tony Hopper
Site Supervisor	Appointed party contracted by the Proponent to oversee daily site operations and site management.	Arcadias Contact: Christo Louw
Environmental Representative	Appointed party contracted by the Proponent to oversee environmental compliance.	Saunders Havill Group Contact: Murray Saunders
Fauna/Spotter Catcher	Appointed Contractor employed to implement fauna welfare responsibilities with vegetation clearing operations. The Fauna Spotter Catcher is a person who holds a rehabilitation permit with an extended authority issued by EHP specifying the gilder may take, keep or use an animal whose habitat is about to be destroyed by a human activity.	Queensland Fauna Consulting Contact: Bryan Robinson
Koala Spotter	Appointed Contractor employed to implement Koala welfare responsibilities associated with vegetation clearing operations. The Koala Spotter is a person who holds a tertiary qualification in Biology or Zoology, or who is demonstrably experienced in the identification and location of Koalas in their natural habitat and has an authorisation from EHP to conduct such activities. For example, demonstrably experienced may include a Koala keeper employed by a licensed wildlife exhibitor (i.e. zoo) may be capable of demonstrating competence in locating Koalas.	Queensland Fauna Consulting Contact: Bryan Robinson
Council	Ipswich City Council (ICC)	Ipswich City Council (ICC) Contact: Tim Foote

06 PRE-CLEARANCE - VEGETATION MANAGEMENT

P1– Vegetation Management (General)

Vegetation clearing must be undertaken in accordance with approved plans to ensure protection of areas of ecological significance and agreed retained linear open space corridors. Habitat trees where marked for retention must not be damaged as a result of tree clearing and or are to be removed at the specification and control of the appointed Fauna Spotter.

Table 1 describes the relevant management requirements to address this issue.

Objective

- 1. To identify clearing in the plans and specification, trees to be retained and trees to be cleared. Areas of retention should be clearly marked and fenced.
- 2. To ensure that all contractors understand the requirements of protection and retention and install protective devices to ensure additional clearing occurs.
- To ensure that the work program is such as to minimise the time between when clearing occurs and the cleared ground is stabilised.
- 4. To ensure that cleared material is mulches or wood-chipped as appropriate for recycling
- 5. To protect linear open space from construction damage and run-off.

Management Strategy

- Clearing to be undertaken in accordance with measures outlined in the EPBC Management Plans.
- Install stormwater management devices as per V15- Stormwater Management Plan.

Performance Indicators

- Integrity of protective devices.
- Existing vegetation and trees retained in good health, with no scars from earthworks machinery and no erosion and sediment deposited within linear open space/retention areas.

Clearing activities should be undertaken in accordance with the with all management plan requirements and associated approval conditions. This SMBP shows the phase 1 clearing of V15 of Spring Mountain. It is acknowledged this clearing line is offset 10m from the ultimately clearing line. Additional lineal clearing will be completed as part of phase 2 works.

Requirements	Monitor and report on the success, protection and retention, and integrity of protective devices such as fences and sediment fences through		Construction	
Monitoring	Weekly inspection and log.	Contractor	During Clearing & Construction	
Reporting	Monthly (until operation).	Contractor	During Clearing & Construction	
Corrective Action	Repair, replace or reinstate protective devices.	Contractor	During Clearing & Construction	
	Appropriate treat any damage to trees or vegetation marked for retention as required.	Contractor	During Clearing & Construction	

06 PRE-CLEARANCE - VEGETATION MANAGEMENT

Adjoin Plan next page

06 PRE-CLEARANCE - VEGETATION MANAGEMENT

P2 – Protection of MNES Fauna (Koala and Grey-headed Flying Fox) and Native Wildlife (Vegetation Clearing)

Clearing of native vegetation has the potential to result in direct injury or death to fauna. Clearing of vegetation for the purposes of preparing development areas also has the potential to result in incidental damage to adjacent habitats to be retained.

Development protocols to respond to injured wildlife must be prepared prior to vegetation clearing operations. It is expected that some of these protocols are likely to be applicable to responses required for all injured fauna (including Koala) and must be included within the Animal Welfare Plan (AWP) to be prepared by the appointed fauna spotter catcher.

Table 2 describes the relevant management requirements to address the protection of terrestrial fauna, specifically Koala, during vegetation clearing and

Objective

- To minimise and mitigate adverse direct and indirect effects of vegetation clearing on terrestrial including Koala and Grey-headed Flying-fox, during clearing and construction.
- 2. Prevent mortality or injury to terrestrial wildlife, specifically Koala.

Management Strategy

- Prevent damage and/or disturbance to native vegetation and associated habitats outside clearing areas.
- Clearing and construction operations are employed to maximise animal welfare and reduce fauna mortality.
- Informal all personnel of site environmental responsibility.
- Reuse hollows and large rocks for habitat in retained habitat areas/linear open space.
- Safe fauna movement opportunities are provided within linear open space to prevent fauna moving through construction areas.
- Direct clearing activities from open area to less open areas allowing fauna to natural seek shelter in conservation land and linear open space/retained habitat
- Provision of permanent and temporary fencing in accordance with the V8- Vegetation Management Clearing Plan
- Undertake works in accordance with V8 Direction of

Clearing Plan and install fencing in accordance with V8-VMCP

<u>Performance Indicators</u>

- Prevent fauna mortality and disturbance to terrestrial fauna.
- No injury or death of Koala.
- No damage to linear open space/retained habitat.
- No disturbance to native vegetation outside permitted clearing footprints.

Fauna Management

Lendlease Communities Pty Ltd commits to the use of leading practice methods and processes for the role of Wildlife Spotter Catchers in the engagement of any contractors for native vegetation clearing works. The standards and requirements outlined in this Specification Note are acknowledged as above minimum requirements in most Local Government areas and are applicable despite lessor requirements listed within individual project approval packages.

As a minimum specification Wildlife Spotter Catchers will retain the following Queensland State Government Permits:

- . Animal Ethics
- 2. Scientific Purposes Permit
- 3. Scientific User Registration
- 4. Damage Mitigation Permit
- 5. Rehabilitation Permit

Wherever practical all clearing works will be coordinated in general accordance with applicable site based components of the DRAFT Code of Practice for the welfare of animals affected by land-clearing and other habitat impacts prepared by the Australia Zoo Wildlife Warriors and Voiceless (and or any contemporary Industry based final version of this Draft Code). This includes mandatory controls on the timing and sequencing of clearing works integrated with a regimented series of fauna management protocols implemented by registered Fauna Spotter / Catchers. The following procedural stages listed in the Draft Code are to be applied to clearing works on all Lendlease projects:

Action 1 – Engagement Wildlife Spotter Catcher

Action requires that the developer (and or the developer's representative through the principal contractor) engage a Wildlife Spotter Catcher with full registrations and licences provided in accordance with the Queensland Government's National Parks and Wildlife Services.

A Registered Wildlife Spotter Catcher engaged shall have the minimum permits listed in this specification.

Action 2 – Wildlife Spotter Catcher to Prepare a Wildlife Protection and Management Plan (WPMP)

The WPMP should be submitted to the Queensland Department of Environment and Heritage Protection (EHP) or relevant authority and or stakeholder. The WPMP should include the following information:

- Description of the project with reference to impacts on wildlife or wildlife habitat;
- Pre development plan of the site showing habitat areas, features, corridors, riparian habitats and adjacent areas;
- Results of any fauna surveys including pre-clearance surveys; and
- A wildlife and habitat impact assessment based on the proposed development works.

<u>Action 3 – Prepare a Wildlife and Habitat Impact Mitigation</u> <u>Plan</u>

Following completion and endorsement of the WPMP the Wildlife Spotter Catcher should prepare a more specific Wildlife and Habitat Impact Mitigation Plan, which will include details 2.

- Measures required to be completed to minimise wildlife a.
 and habitat impacts during operational works;
- Wildlife capture and removal plan;
- Contingency plan for wildlife requiring euthanasia, other veterinary procedures or captive care;
- Wildlife storage and housing plan;
- Wildlife release and disposal plan; and
- Post works measures to minimise impacts on wildlife.

Lendlease Communities Pty Ltd support the use of innovative leading practice methods minimising and mitigating impacts on all native fauna during clearing operations.

Action 4 – Wildlife Spotter Catcher Role at Pre-Start Meeting m.

Prior to the commencement of any construction works, a prestart meeting is to be held between the project manager, site of fore-person, plant operators and applicable Local and State Government representatives. At the pre-start meeting, the Wildlife Spotter Catcher is to outline the clearing process and the requirements of the WPMP.

Action 5 – During Construction

The Wildlife Spotter Catcher is to be on-site during all phases of construction which involve potential impacts on wildlife or

habitat (unless otherwise specified by the appointed Wildlife Spotter Catcher. This will enable to the Wildlife Spotter Catcher to make any necessary adjustments to the approved Clearing Management Plans and WPMP to cater for any specific issues encountered during the clearing works.

Action 6 – Post Works Reporting

During the course of all site works, including the pre-clearance surveys, the Wildlife Spotter Catcher is to keep an accurate record of all animals encountered, captured, incidents and disposals for each stage of the project. The records should form part of the Wildlife Management Report to be issued under licence requirements to the State Government. The Wildlife Management Report should consist of the following 3 sections, where they are applicable to the project:

- 1. **Wildlife Habitat Management Plan** Aspects of the planning, design, construction and ongoing operation of the project in which risks to wildlife have been identified. This plan should also include recommendations and outline the type, frequency and timeframes for monitoring
- Wildlife Capture and Disposal Plan Should contain the following details for each captured animals:
- Species
- b. Identification name or number
- c. Sex (M, F or unknown)
- d. Approximate Age or Age Class (neonate, juvenile, sub-adult, adult)
- e. Time and date of capture
- f. Method of capture
- g. Exact point of capture (GPS coordinates)
- n. State of health
- i. Incidents associated with capture likely to affect health
- j. Veterinary intervention or treatments
- k. Time held in captivity
- Disposal method (euthanasia, translocation, re-release)
- m. Date and time of disposal
- n. Detailed of disposal (GPS points of release)
- For released animals, location relative to point of capture
- 3. **Animal Injury and Euthanasia Report** similar details for the Wildlife Capture and Disposal Plan should be included in this report.

Koala Management & Welfare

While clearing activities aim to protect and minimise impacts to all terrestrial fauna, specific management measure for Koala are required as part of the EPBC approval and have been specified within the Fauna Management Plan, prepared by **Saunders Havill Group** which should be read in conjunction with the plan.

Key outcomes within the FMP for Koala include:

- Koalas on site are protected
- Koala habitats are protected, maintained and their integrity enhanced.
- The abilities for Koalas to move into, within and out of the sit e is maintained.
- All persons involved in construction and operation of the development are aware of the site values, their potential to impact on Koalas and their habitats, and their responsibilities in regard to procedures and strategies within approved management plans.

Table 2: P2 – Protection of MNES Fauna and Native Wildlife (Vegetation Clearing)

Issue	P2 - Protection of MNES Fauna and Native Wildlife	Responsible Person	Timing	
Implementation	No vegetation removal shall occur until relevant approvals have been obtained All permit conditions will be followed	Proponent	Prior to Clearing	
Requirements	To prevent damage and / or disturbance to native vegetation and associated habitats outside clearing areas: a. Clearing boundaries will be delineated on all drawings and in the field to define the authorised clearing extent. b. Installation of vegetation clearance markers (e.g. high visibility poly-web fencing) prior to the commencement of vegetation clearance to identify and protect remnant vegetation for retention. c. Along the interface between clearing precincts and open space / Environmental Corridors, trees are to be felled towards the clearing precinct to avoid damage to these areas. d. Clearing vegetation is to be stockpiled so as not to impede damage to drainage channels.	Contractor	Prior to Clearing & During Clearing	
	No clearing of vegetation is to commence without the presence of an EHP approved Fauna Spotter Catcher, or where clearing includes non-juvenile Koala habitat trees, a Koala Spotter. a. An appointed Site Superintendent will be responsible for ensuring that all trees scheduled for removal will be checked on the day of their removal for the presence of fauna by an EHP approved Fauna Spotter Catcher / Koala Spotter as vegetation characteristics dictate. b. The EHP approved Fauna Spotter will check and clear vegetation prior to its felling and, if required, will relocate native wildlife (other than Koala) into appropriate habitat areas within the site which are to be retained. In the case of a Koala being present, translocation of the individual/s must occur in accordance with requirements for Koala. c. Hollow-bearing (habitat) trees are to be identified in the field and by plan prior to commencement of clearing operations. These shall be marked and dismantled using a cherry picker and a suitably qualified arborist and Fauna Spotter Catcher. If fauna is present, the tree will either be left standing overnight to allow the animal to leave via their own volition, or will be encouraged from the tree by shaking or other methods deemed suitable by the fauna spotter. Where no signs of fauna are identified, machinery operators will be instructed to fell trees in a manner directed by the fauna spotter to minimise potential risk to fauna.	Fauna Spotter Catcher	Prior to Clearing	
	All construction personnel shall attend environmental training as part of the site induction process prior to entering the work site. As part of this training, all personnel will be instructed on their obligations in regard to vegetation clearing protocols and to protect native fauna. Areas identified for vegetation clearance are to be clearly defined and detailed in site inductions.	Contractor	Prior to Clearing	
	Conduct vegetation clearing in sequential stages for sites with an area of more than 3 hectares. Vegetation clearing is to conform with the following: d. The direction of clearing should be away from threatening processes or hostile environments, and towards the clearing precinct to avoid damage to adjacent retained habitat links, ensuring that: i. Fauna are not required to cross roads or move through developed areas or disturbed areas. Such as residential areas or areas that require movement of greater than 100m over cleared ground to reach suitable habitat; ii. Fauna area not left occupying an "island" of habitat between hostile environments, such as a road and a cleared area, unless there are no other more suitable habitat areas in which to direct fauna, and iii. Fauna can safely leave the site of clearing and relocate to adjacent habitat.	Contractor	During Clearing	

Table 2: P2 - Protection of MNES Fauna and Native Wildlife (Vegetation Clearing)

Issue	P2 - Protection of MNES Fauna and Native Wildlife	Responsible Person	Timing
	 e. Cleared vegetation is to be stockpiled so as not to impede fauna movement. f. Where vegetation to be cleared includes non-juvenile Koala habitat trees, implement sequential clearing as per the requirements for Koala. 		
	Companion animals (e.g. dogs) are to be banned from all construction areas.	Contractor	At all times
	Vehicle access within retained habitat/linear open space will be limited and appropriately signed.	Contractor	Prior to Clearing & During Clearing
	Conduct vegetation clearing in accordance with Section 4 of the Spring Mountain FMP (prepared by Saunders Havill Group dated July 2015) which outlines specific implementation requirements for Koala including clearing in sequential stages for sites. For a site more than 6ha vegetation clearing is to conform with the following: a. Is carried out in a way the ensures Koalas on the area being cleared have enough time to move out of the clearing with without human intervention and involves i. Ensuring not more than 3ha or 3% of the sites area (whichever is greater) in any one stage ii. Ensuring that between each stage and the next there is at least one period of 12 hours at starts at 6pm on a day and ends at 6am on the following day, during which no trees are cleared on the site b. Is implanted in a way that ensures, while clearing is being carried out, appropriate habitat links are maintained within the clearing site and between the site and its adjacent areas allowing Koalas living on the site to move out of the site c. Ensures that no tree in which a Koala is present, or a tree with a crown overlapping a tree in which a Koala is present, is cleared until the tree is wacated by the Koala. d. Ensures that vegetation clearing is directed away from threatening processes, or hostile environments, and towards any retained vegetation or habitat links, ensuring that: i. Koalas are not pressured, through loss of habitat, to cross roads or move through developed or disturbed areas, such as residential areas or areas that require movement of greater than 100m over cleared ground to reach suitable habitat; ii. Koalas are not left occupying an "island" of habitat between hostile environments, such as road and cleared areas, unless there are no other more suitable habitat areas in which direct Koalas; and iii. Koalas can safely leave the site of clearing and relocate to adjacent habitat. e. The Koala spotter is responsible for ensuring, throughout the duration of clearing operations, that no tree in which a Koala has	Fauna Spotter Catcher/ Koala Spotter	During Clearing

Table 2: P2 – Protection of MNES Fauna and Native Wildlife (Vegetation Clearing)

Issue	P2 - Protection of MNES Fauna and Native Wildlife	Responsible Person	Timing
	A requirement that a permit to interfere with wildlife from EHP will be mandatory for the wildlife handing activities as will the appropriate Animal Ethics Permit from DAF. Construction personnel shall not attempt to handle any wildlife. a. Fauna / Koala handling and relocation activities must only be undertaken by those identified on a current site-specific Damage Mitigation Permit (Removal and Relocation of Wildlife) from EHP. b. Koala Spotter/Fauna Spotter Catchers are required to relocate injured wildlife to the nearest designated veterinary clinic of wildlife hospital. Full contacts will be provided within the AWP. c. A register of fauna incidents / interactions is to be maintained daily during clearing operations.	Fauna Spotter Catcher/Koala Spotter	During Clearing & Construction
	The timing of vegetation clearance should be selected in order to minimise impacts (direct and indirect) to affected fauna habitats during optimum breeding period.	Contractor	During Clearing
	Avoid clearing of vegetation between the hours of 6pm and 6am.	Contractor	During Clearing
Monitoring	For each day of native vegetation clearing operations, a daily audit log is to be completed by the Contractor either prior to, or on completion of daily operations. Audit of key requirements, e.g. clearing contained within designated limits, integrity of clearing boundary devices, no damage to vegetation outside clearing boundary, Fauna Spotter Catcher present.	Contractor	During Clearing
Reporting	Animal Welfare Plan is prepared prior to clearing operations by the appointed Fauna Spotter Catcher.	Proponent / Fauna Spotter	Prior to Clearing
	Weekly report by the Fauna Spotter Catcher/ Koala Spotter to the Contractor on the clearing of any native vegetation and any animals encountered, injured or relocated is to be submitted.	Contractor	During Clearing
	Monthly report by the Contractor the Site Superintendent on native vegetation operations, including compliance, non-compliance incidents (fauna injury and responses) and corrective actions, outcomes of Fauna Spotter Catcher activities.	Contractor	During Clearing & Construction
	Bi-annual report by the Site Superintendent to the Proponent. Report to consider incident patterns, if any, and provide recommended solutions and a description of the corrective actions taken.	Contractor	During Clearing & Construction
	Annual site audit by the Environmental Representative and report to the Proponent	Environmental Representative	During Clearing & Construction
Corrective Action	In the event that monitoring identifies practices inconsistent with the strategies developed for this FMP, the Contractor shall take the necessary corrective steps and note them in the monthly report to be reviewed by the Site Superintendent.	Contractor	During Clearing & Construction
	In the event that monitoring identifies practices inconsistent with the strategies developed for this SBMP, the Contractor shall take the necessary corrective steps and note them in the monthly report to be reviewed by the Site Superintendent	Contractor	During Clearing & Construction

08 FAUNA MANAGEMENT - CONSTRUCTION

P3 – Maintenance of Safe Wildlife Movement Opportunities (Site Preparation Operations)

The following suite of best practice measures will be employed throughout the site to minimise fauna habitat fragmentation, facilitated fauna movement and reduce related injury and mortality. Management requirements are considered in the context of:

- Site preparation operations (i.e. during vegetation clearing and earthworks phases); and
- Design treatments and strategies for the built phase of the development

Table 3 describes the relevant management requirements in regard to site preparation operations. The following should be read in conjunction with the requirements for Koala design treatments and strategies for the built phase of the development.

Retention and rehabilitation of the Mountain Creek Corridor to the west, in addition to the 293ha of offset land for Conservation to the south, will occur as a result of the Spring Mountain development to maintain fauna movement and connectivity within and between the development site.

<u>Objective</u>

- . To avoid the impact of habitat fragmentation by roads and maintain safe movement opportunities for native wildlife (including Koala and Grey-headed Flying-fox) between linear open space.
- 2. To maintain fauna movement opportunities within retained habitat areas and minimise fauna movement opportunities through site preparations.

Management Strategy

- Develop a track plan for retained habitat areas/linear open space which allows fauna movement to be maintained
- Restrict access to retained habitat areas/linear open space for environmental management only.
- Reduce road speeds
- Increase driver awareness and education

<u>Performance Indicators</u>

Minimal fauna mortality.

Temporary Fencing

Prior to the commencement of vegetation clearing a temporary fauna exclusion fence will be erected around the area of clearing and works and be maintained until the completion of major civil works. The purpose of the fence is to minimise any native fauna (including koala) from entering into the clearing and or post clearing construction zone during a time when potential risks of impact are at their highest.

The fencing proposed is a "floppy-top" temporary fauna exclusion fencing as per the details and photos shown on this drawing sheet. This fencing type is preferred as it continues to allow any fauna within the impact zone to exit, however prevents new or re-entry once the fence is erected. The fencing type can also be erected along random alignments and relocated to new areas as the clearing areas expand in future clearing and development events. This fencing type has been successfully used as a temporary barrier on other koala related projects within the vicinity of major roads and housing areas.

Fauna exclusion fencing

Table 3: P3 – Maintenance of Safe Fauna Movement Opportunities – Site Preparation Operations

Issue	P2 – Maintenance of Safe Fauna Movement Opportunities – Site Preparation Operations (Roads and Vehicle Interactions)	Responsible Person	Timing
Implementation	A site access plan is to be developed for the Environmental Corridors.	Proponent	Prior to Clearing
Requirements	Site protocols are to be established which restrict authorised area access to the approved track network identified with the plan.	Contractor	Prior to Clearing
	All construction personnel shall attend environmental training as part of the site induction process prior to entering the work site. As part of this training, all personnel will be instructed on their obligations in regard to vehicle movement restrictions and construction speed limits.	Contractor	Prior to Clearing
	Erect temporary exclusion fencing around the area of clearing and works and be maintained until the completion of major civil works.	Contractor	Prior to Clearing
	Vehicle movements outside designated operational areas (other than for land management purposes) will be prohibited.	Contractor	During Clearing & Construction
	Road speeds throughout construction areas and through retained habitat areas will be restricted to 50km/hr.		During Clearing & Construction
	Strategic use of awareness signage is to be implemented along the interface between operational areas and Environmental Corridors and access restriction signage at all track entry points to Environmental Corridors during construction works.	Contractor	During Clearing & Construction
	Proposed construction access roads will be subject to design treatments to ensure safe fauna crossing opportunities. Construction of an elevated portion (or portions) in the form of bridging structures (culverts) in associated with guide fencing will be incorporated to ensure the provision of safe crossing opportunities.	Contractor	During Clearing & Construction
Monitoring	Weekly inspection and log.	Contractor	During Clearing
Reporting	Monthly report by the Contractor to the Site Superintendent in regard to development / maintenance of structures implemented to facilitate fauna movement, review of fauna / vehicle incident patters, if any, and provide recommended solutions, an a description of corrective actions taken.	Contractor	During Clearing & Construction
	Bi-annual audit report by the Site Superintendent to the Proponent. Report to include compliance with site access restrictions, integrity of structure implemented to facilitate fauna movement, review of fauna/ vehicle incident patterns, if any, and provide recommended solutions, and a description of corrective actions taken.		During Clearing
	Annual site audit by Environmental Representative and report to the Proponent.	Environmental Representative	During Clearing & Construction
Corrective Action	In the event that monitoring identifies practices inconsistent with the strategies developed for this SBMP, the contractor shall take the necessary corrective steps and note them in the monthly report to be reviewed by the Site Superintendent.	Contractor	During Clearing & Construction

09 THREATENED FLORA MANAGEMENT

P5 – Threatened Flora Management

Plectranthus habrophyllus, a herb listed as Endangered under the EPBC Act, has been recorded at several locations across the Spring Moutnain project site. Core populations have been identified within Core Conservation areas by Yurrah. The majority of these locations are associated with waterways within linear open space and the habitat is to be protected.

Pre-clearance Survey

In accordance with the EPBC approved Threatened Flora Management Plan, prepared by **Yurrah**, pre-clearance surveys for each development precinct must occur by a suitable qualified person prior to the commencement of clearing. An additional individuals must be recorded and translocated where necessary.

<u>Translocation</u>

Where plants are located within the development footprint or near the edge of the footprint, and are at risk of impact, these plants will be translocated to establish a new population in suitable habitat within the proposed Linear Open Space. The habitat for both translocated individuals and in situ individuals will be protected within a Core Conservation Area.

As an added habitat protection measures, Buffer Areas, with an offset width of 20m, will be established around Core Conservation Areas. No Go Zones must be marked out by the 20m buffer around know populations within Core Conservation areas. No work apart from conservation management activities is to be permitted within Core Conservation Areas.

Clearing and Construction

Plectranthus habrophyllus is to be protected from impacts of construction. Stormwater Management Plans, Bushfire Management Plans and Weed Management are to address threatened flora management.

Table 5 describes the relevant management requirements to address this issue.

Objective

1. To encourage the locally resident populations of threatened flora species to increase at a natural rate to a desired level on site.

<u>Management Strategy</u>

Threatened flora habitat to be protected through the

- approved Threatened Flora Management Plan
- Recognise and protect all linear open space through management of interface between linear open space and development for bushfire, weeds and access issues.
- Establish Core Conservation Areas and Buffer Areas at threatened flora locations to target management activities.
- Design a network for fire-trails to defined spatial blocks to prevent damage caused by uncontrolled fire and allow access for maintenance.
- Awareness and education of threatened flora presence.
- Ensure all responsible persons are aware of the significance of this issue and are fully aware of any likely impacts of scheduled works.

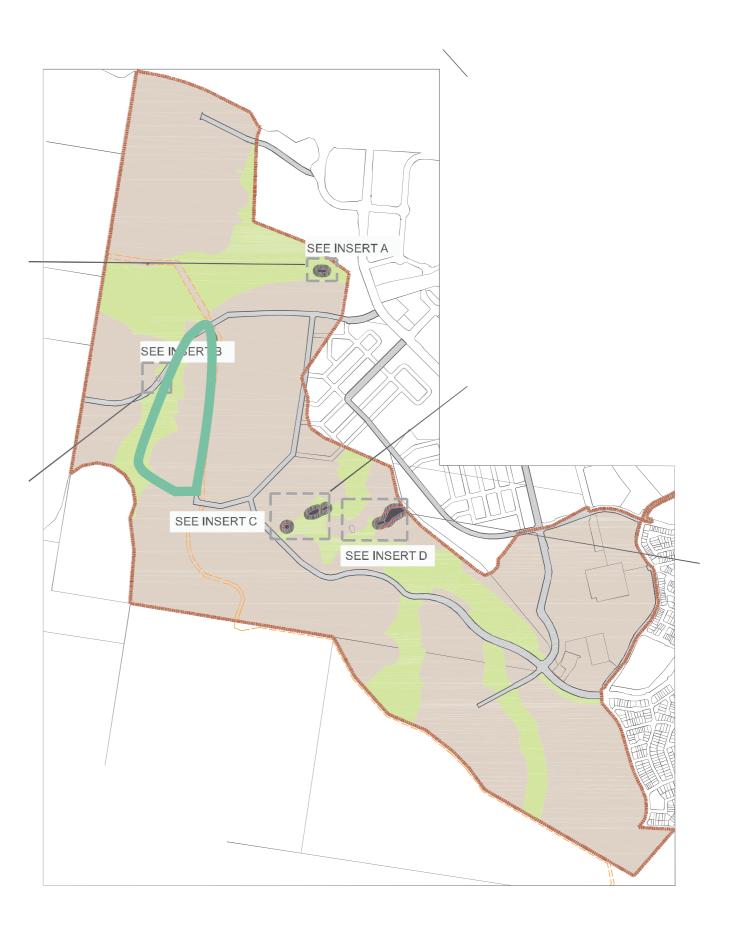

Performance Indicators

- 0% weed cover in Core Conservation Areas and Buffers
- No evidence of damage from stormwater run-off
- Recruitment of threatened flora seedlings in Core Conservation Area
- No damage from uncontrolled access
 - Condition of protective fencing remains undamaged.

Pre-clearance surveys for V8 were undertaken by Saunders Havill Group in December 2015. No Plectranthus habrophyllus individuals were located within the project area.

Photo: Plectranthus habrophyllus (listed as Endangered under the EPBC Act (Cth))

09 THREATENED FLORA MANAGEMENT

<u>Table 5: P5 – Threatened Flora Management</u>

Issue		Responsible Person	Timing	
Implementation Requirements	Core Conservation Areas located within 20m of land proposed for uses other than conservation, identified as areas for additional interface management including: 1. A detailed survey of threatened plant locations by a registered surveyor. 2. Where interfacing with residential, a fence with a minimum 50% transparency to be erected along interface boundary. Signage to be erected identifying area as 'Significant Ecological Area' and 'Dumping of Rubbish Prohibited' and where further information can be obtained. 3. Where interfacing with road verge or park landscaping, design and plant selection considers and avoids any potential impact upon the threatened flora species. Landscape plant species selected will be non-invasive, existing trees to be retained where possible to maintain microclimate, and clear edge formed that discourages access. Mulch to be preferably sourced from the site and is to be weed free.	Proponent	Design /Prior to Clearing &	
	 Undertake pre- clearing surveys. Once the line of clearing (including construction of parks, pedestrian tracks and fire trails) is marked out by a registered surveyor, an additional survey for threatened species is to be undertaken within the clearing area, and Linear Open Space within 10m of the clearing line. Additional individuals, or groups of individuals located to be recorded with a GPS, given a unique ID number, and flagged with marking tape. Where necessary individuals will be translocated in accordance with protocols in the Threatened Flora Management Plan. The boundary of the Core Conservation Areas will be adjusted as necessary (if not within construction footprint), to include any additional individuals located during of the pre-clearing survey. 	Proponent	Prior to Clearing	
	 Establish No Go Zones. Core Conservation Areas less than 20m from of the clearing and construction footprint will be identified on construction drawings and through signage on site as 'No Go Zones'. Their associated Buffer Areas will be identified as 'Proceed with Caution Zones'. Work within the Buffer Area will require supervision by the Project Ecologist. No work apart from conservation management activities is to be permitted within the Core Conservation Areas. 	Contractor	Prior to Clearing	
	 Where Linear Open Space has not been fenced as part of general vegetation protection, temporary fencing must be installed around the Core Conservation Area, where practical, and necessary (i.e. steep terrain may form natural barrier). The temporary fence shall be a minimum of star pickets with 3 strand wire and high visibility mesh attached to the top wire (with minimum gap of 500mm along the bottom) and erected prior to clearing. 	Contractor	Prior to Clearing	
	 The required alignment and extent of the fencing is to be undertaken in consultation by the project ecologist and inspected before the start of clearing. Signage is to be attached to fencing clearly identifying the site as a significant ecological area and a 'No Go Zone', and no entry permitted unless approval given by Proponent. Mapping will be produced identifying location of threatened flora and alignment of protective fencing during detailed design for each Phase of the Spring Mountain 			

09 THREATENED FLORA MANAGEMENT

<u>Table 5: P5 – Threatened Flora Management</u>

Issue	P4 Threatened Flora Management	Responsible Person	Timing
	Stormwater Management controls to be installed through implementation of an Approved Stormwater Management Plan for Spring Mountain. 1. The Stormwater Management Plan will outline management required to ensure water quality and quantity flowing into Core Conservation Areas and all areas of proposed conservation are at predevelopment levels. 2. All stormwater management devices are to be installed and inspected prior to clearing and construction. Stormwater management devices to be regularly checked and maintained to ensure they perform their intended function.	Contractor	Prior to Clearing
	Induct all site workers and visitors in the presence and significance of threatened species on site, and on the management measures being implemented at the present time. All personal associated undertaking works within a Buffer Area are to be made aware of the presence of threatened plants, and are to be educated on protective measures in place, prior to entering area. No personnel to enter Core Conservation Area without approval.	Contractor	Prior to Clearing
	Fire trails will be installed in accordance with the Final Bushfire Management Plan with locked gates and structures to prevent access to vehicles, other than emergency and maintenance vehicles, into all Linear Open Space areas.	Contractor	During Clearing
Monitoring	Core Conservation Areas and Buffers will be monitored on a 3 monthly basis for the first year, and annual thereafter for 2 years subject to satisfactory performance including: Provide general photographic descriptive record Establish permanent sample quadrats located in each management block, according to an agreed sample strategy Confirm the absence of environmental weeds Measure species richness of the ground layer. Measure abundance of flowing threatened species. Measure abundance of threatened species seedlings General observations.	Contractor	During Construction / Operation
Reporting	Every 3 months by the Environmental Representative to the Proponent for the first year, every 6 months in the second year and once in the third year/	Environmental Representative	During Clearing & Construction
	Annually by the Proponent to the DoE including non-conformances, corrective actions and assessment of monitoring results.	Proponent	During Clearing
Corrective Action	In the event that monitoring identifies practices inconsistent with the strategies developed for this SBMP, the contractor shall take the necessary corrective steps and note them in the monthly report to be reviewed by the Site Superintendent. 10 FLORA & FAUNA CHECKLIST

Pre-Clearance Checklist:

This Site Based Management Plan (V15) contains only a small portion of information included within existing assessment management plans for Spring Mountain. Subsequently, the volume of requirements remains complex and overlapping. To ensure compliance with approval requirements and provide a record trail for reporting to the Commonwealth Department of the Environment the following pre-clearance checklist is to be completed with each phase of works.

The checklist is to be completed by the principal contractor and requires sign off by the Environmental Coordinator and Fauna Spotter. To complete the checklist a number of items need to be issued from various parties to the principal contractor (eg confirmation of pre-clearance surveys).

The pre-clearance checklist is established in a format which enables direct annual reporting to the <u>Department of the Environment</u> and will include a number of attachments.

Springfield Rise: Village 15 –Inspection of flagging for demarcation of clearing extents (Phase 1- early works bulk earthworks), 7002 Grande Avenue, Springfield (Lot 200 on SP283567)

Dear lan,

The *Environmental Management Division* of **Saunders Havill Group** was engaged by **Lendlease Communities** to carry out an inspection of flagging for demarcation fencing for the Phase 1- Early Works Bulk Earthworks clearing extent associated with the construction of V15 at Springfield Rise.

Flagging of the V15 Phase 1 clearing extent was undertaken by the appointed surveys, **RPS**, on the 27th February 2017. Ecologists from **Saunders Havill Group** checked and reflagged the clearing extent on the 27th February 2017 to confirm works will be undertaken in accordance with relevant Commonwealth and Council permit requirements.

The GPS track log of the inspection extent shown in the plan provided as **Attachment 1**. A post-inspection notification is provided as **Attachment 2** to be kept for your records.

Kind regards,

Murray Saunders

Director - Saunders Havill Group

Dear Mr Ian Murray

Applicant: Lend Lease Communities (Springfield) Pty Ltd

Exempt clearing notification (protected plants)

Where clearing is to be conducted –

Street Address: Sinnathamby Boulevard, Springfield Lot/Plan: Lot 22 on SP234042 and Lot 33 on SP269190

EHP Reference: AR082999

Thank you for your email. Please retain this email as acknowledgement of receipt of a protected plant exemption notification submitted under section 261ZA of the Nature Conservation (Wildlife Management) Regulation 2006. Clearing of a protected plant under this section must be conducted within two years after the flora survey report was submitted to the Department of Environment and Heritage Protection.

It is strongly recommended for audit purposes that you keep this email together with the relevant flora survey trigger map, flora survey report and any other documentation relating to the clearing in question.

Please visit www.ehp.qld.gov.au for information about available online services.

Kind regards Katrina

environmental management protected plants survey report

I. Introduction

The Environmental Management Division of the Saunders Havill Group was engaged by Lendlease Communities to prepare this Protected Plants Flora Survey Report to enable clearing within areas mapped as 'High Risk' under the Nature Conservation Act 1992 (NCA). Clearing works are associated with early works stages at Springfield Rise master planned development, specifically the development areas known as the Village 13 Basin and Village 15 (V13 Basin & V15) The Springfield Rise development site is located Sinnathamby Boulevard, Springfield Central (Lot 200 on SP283567 and Lot 9000 on SP288670) and is within the jurisdiction of Ipswich City Council (ICC).

The **Queensland Government** has adopted a risk-based approach to the regulation of protected plants under the NCA. The regulatory framework captures activities that pose a high risk to plant biodiversity. Regulatory, educational and compliance effort are consequently focused on high risk activities. Under the framework, when a non-exempt clearing activity is proposed within a 'High Risk' area, the proponent of that activity is required to complete a flora survey prior to commencement of clearing.

The main objective of the flora survey is to locate any Endangered, Vulnerable or Near Threatened (EVNT) plants that may be present within the clearing impact area. This is especially important for determining the degree of assessment required for a particular clearing activity. For example, if the survey establishes that EVNT plant species are not present within the clearing impact area, the proposed clearing will be exempt and, following notification to the department, a clearing permit will not be required. Alternatively, if EVNT plant species are identified, and clearing is considered to impact on the EVNT plant (i.e. clearing comes within 100m of the EVNT plant) then an application for a Protected Plant Clearing Permit is required.

Contextually, the Springfield Rise project site is located to the west of Springfield Central, approximately 13km southeast of Ipswich City and approximately 26 km southwest of Brisbane City. The site is bordered by commercial development and educational facilities associated with Springfield Central to the northeast, residential development to the southeast and large vegetated rural properties adjoining White Rock-Spring Mountain Conservation Estate and more broadly the Flinders-Karawatha Bioregional Corridor. The site is bound by Centenary Highway to the north and Sinnathamby Boulevard to the east. The surrounding suburbs of Redbank Plains, Springfield Lakes and Swanbank are highly urbanised and contain a mixture of residential housing, commercial properties and industrial land uses. Refer to **Figures 1 and 2** for site context and aerial. Clearing works proposed within the V13 Basin & V15 as part of early works for the commencement of the Springfield Rise project which forms part of the Greater Springfield urban development area (refer **Plan 1**). It is noted that the Springfield Rise project (refer **Plan 2**) has been approved by the Commonwealth **Department of the Environment and Energy** (DEE) (EPBC 2013/7057).

The flora surveys outlined in this report were conducted where proposed clearing is mapped within 'High Risk' areas under Protected Plants Flora Survey Trigger Mapping (refer **Figure 3**) as per the *Flora Survey Guidelines – Protected Plants Nature Conservation Act 1992*. It is noted that previously NCA protected plants surveys have been undertaken and exempt clearing notification issued by the **Department of Environment and Heritage** (EHP) for by for Villages 6, 8 and 13 and the Haul Road (AR082999) and Village 7, DA15 and DA16 (AR095633) and the Village 7 and Village 12 (AR098350).

2.I. Nature Conservation Act 1992

The NCA classifies and protects significant areas (Protected Areas) and protects threatened plant and animal species. The *Nature Conservation (Wildlife) Regulation 1994* (NCWR) lists plant and animal species presumed extinct, endangered, vulnerable, near threatened, least concern, international or prohibited.

The **Queensland Government** has adopted a regulatory framework that captures activities that pose a high risk to plant biodiversity. Under the framework, when a non-exempt clearing activity is proposed within a 'High Risk' area, the proponent of that activity is required to complete a flora survey prior to commencement of clearing. The Protected Plants Flora Survey Trigger Map shows 'High Risk' areas for protected plants and is used to help determine flora survey and clearing permit requirements for a particular location.

A search of the Protected Plants Flora Survey Trigger Mapping indicated proposed clearing areas within the subject site are overlayed as 'High Risk' and so are subject to flora survey requirements (refer **Figure 3**).

Prior to flora surveys, the schedules of the NCWR were considered in this report using a Wildlife Online Database Search with a 10 kilometre radius from the site. Six (6) flora species listed under the NCWR were identified as having the potential to occur on site and are presented in **Table 1**. Refer to **Appendix A** for full search results.

Table 1: Wildlife Online Search Results - Flora

Scientific Name	Common Name	Status
Marsdenia coronata	Slender Milk Vine	Vulnerable
Plectranthus habrophyllus	-	Endangered
Eucalyptus curtisii	Plunkett Mallee	Near Threatened
Melaleuca irbyana	Swamp Tea Tree	Endangered
Notelaea ipsviciensis	-	Endangered
Notelaea Iloydii	Lloyd's Native Olive	Vulnerable

2.2. Additional legislative instruments

In order to maximise the scope of the flora survey, a search of protected matters listed as potentially present within 10 km of the sites under the Federal *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) was conducted using the Protected Matters Search Tool. Potential flora EVNT species listed under the EPBC Act are presented in **Table 2**. Refer to **Appendix B** for full search results.

Table 2: EPBC Act Protected Matters Search Results - Flora

Scientific Name	Common Name	Status
Arthraxon hispidus	Hairy Joint Grass	Vulnerable
Bosistoa transversa	Three-leaved Bosistoa	Vulnerable
Cupaniopsis tomentella	Boonah Tuckeroo	Vulnerable

Phaius australis	Lesser Swamp-orchid	Endangered
Planchonella eerwah	Shiny-leaved Condoo	Endangered
Plectranthus habrophyllus	-	Endangered
Samadera bidwillii	Quassia	Vulnerable
Sophora fraseri	-	Vulnerable
Thesium australe	Austral Toadflax	Vulnerable

Regional Ecosystem mapping under the *Vegetation Management Act 1999* (VMA) was utilised to inform flora survey targets and techniques. The broader area where the survey sites occur is mapped under the VMA as Least Concern 12.9-10.17a and composite Of Concern RE12.9-10.2/12.9-10.7/12.9-10.19 (65/20/15) as described below and highlighted in **Plan 3**.

Least Concern RE 12.9 -10.17a

Description

Lophostemon confertus or Lophostemon suaveolens dominated open forest usually with emergent Eucalyptus and/or Corymbia species. Occurs in gullies and southern slopes on Cainozoic and Mesozoic sediments.

Least Concern RE 12.9-10.2

Description

Corymbia citriodora subsp. variegata open forest or woodland usually with Eucalyptus crebra. Other species such as Eucalyptus tereticornis, Eucalyptus moluccana, Eucalyptus acmenoides and Eucalyptus siderophloia may be present in scattered patches or in low densities. Understorey can be grassy or shrubby. Shrubby understorey of Lophostemon confertus (whipstick form) often present in northern parts of bioregion. Occurs on Cainozoic and Mesozoic sediments.

Of Concern RE 12.9-10.7

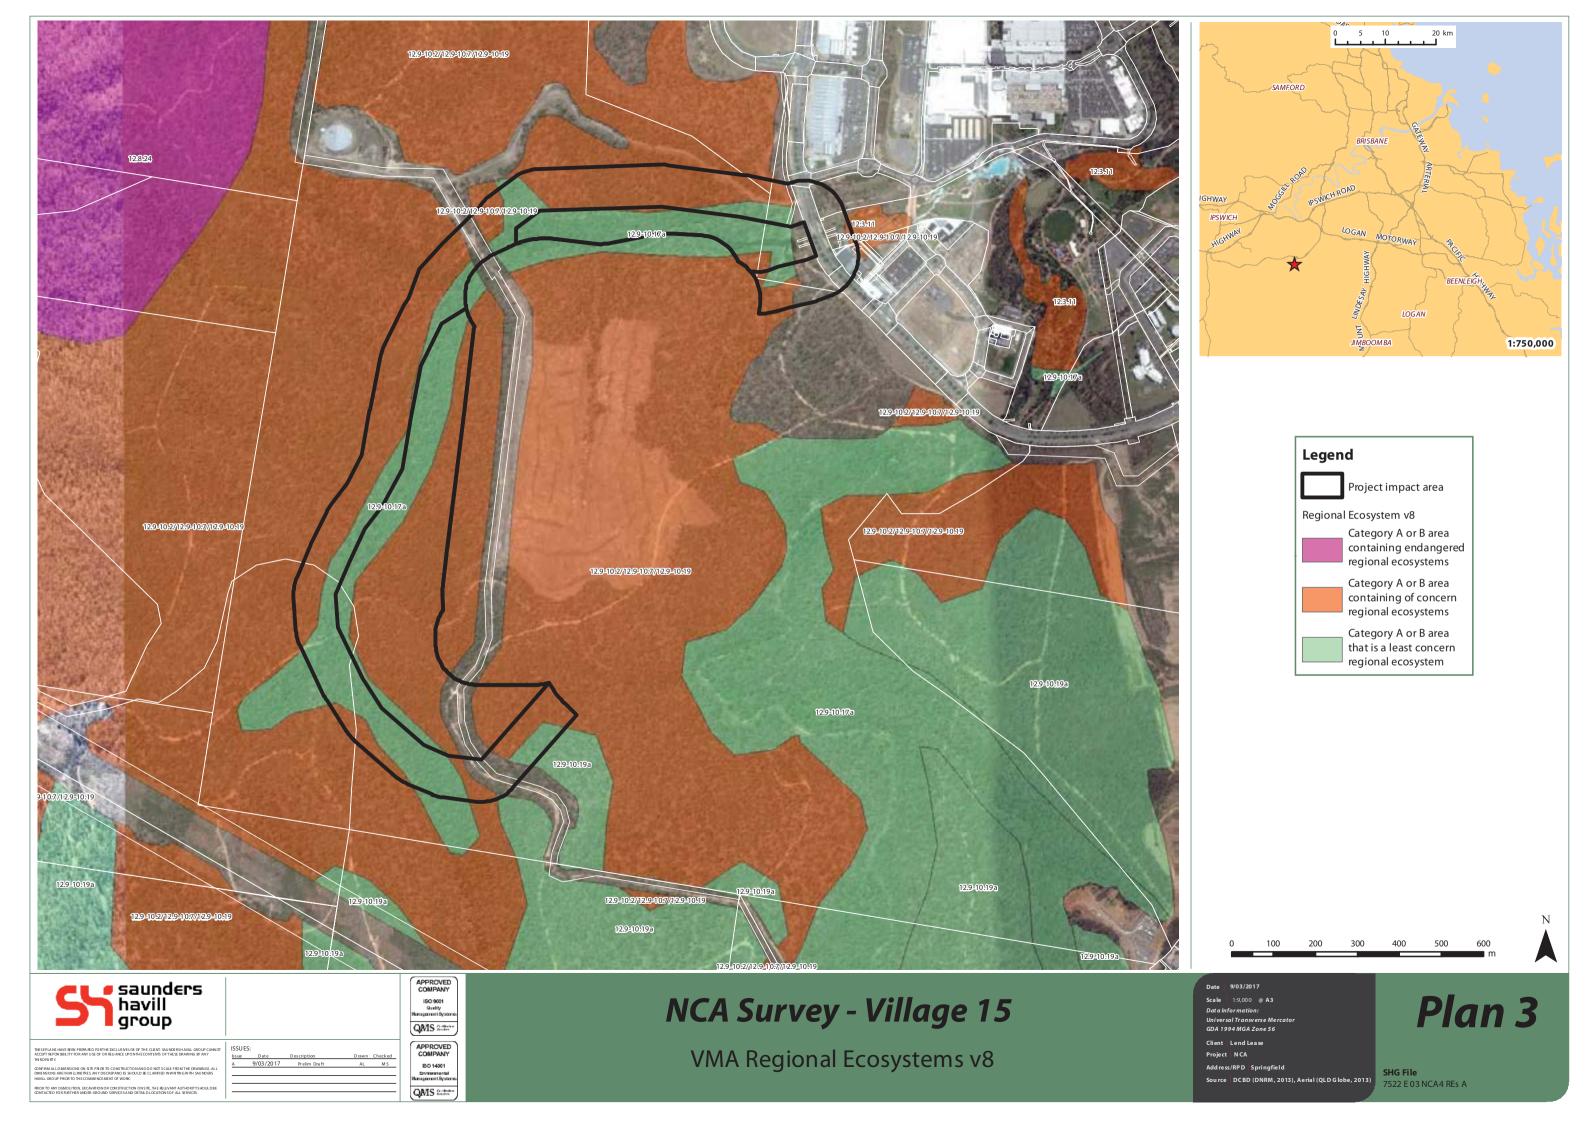

Description

Eucalyptus crebra +/- Eucalyptus tereticornis, Corymbia tessellaris, Angophora leiocarpa, Eucalyptus melanophloia woodland. Occurs on Cainozoic and Mesozoic sediments.

Least Concern RE 12.9-10.19

Description

Eucalyptus fibrosa subsp. fibrosa woodland +/- Corymbia citriodora subsp. variegata, E. acmenoides or E. portuensis, Angophora leiocarpa, E. major. Understorey often sparse.

3. Flora Survey Methodology

3.I. Clearing Impact Area

The proposed clearing site (i.e. Village 13 Bain and Village 15) is completely mapped as 'High Risk' areas under Protected Plants Flora Survey Trigger (refer **Figure 3**). The Clearing Impact Area, which is identified the area to be cleared inclusive of a 100m buffer, is shown in **Plan 4**. It is noted that previously NCA protected plants surveys have been undertaken for Villages 6, 8 and 13 and the Haul Road (AR082999), Village 7, DA15 and DA16 (AR095633), and Village 7 and Village 12 (AR098350) and a NCA exempt clearing notification confirmed by **EHP**.

3.2. Survey extent and Limitations

Table 3 and **Plan 4** summarise the Clearing Impact Area and Transect extent. Two (2) transects were undertaken over each of the V13 basin and V15 Clearing Impact Areas. It is noted that the transect over V15 was completed over 2 days due to the time constraints. These transects covered the entire are and buffer. General observations for EVNT flora species were conducted at all times while on-site, both inside and outside designated Clearing Impact Area.

Table 3: Transect Coordinates

Transect	Start	Finish
1	152.888899, -27.690898	152.888442, -27.682486
2	152.897287, 27.680524	152.890468, -27.680726

3.3. Survey Timing and Limitations

The Clearing Impact Areas include the proposed early works sites for the V13 Basin & V15. With the exception of NCA clearance, all other relevant approvals have been obtained to commence clearing works in the first half of 2017. The site has been subject to numerous ecological surveys as part of obtaining relevant Commonwealth, State and Council approvals. No EVNT species have been recorded as part of pre-clearance surveys undertaken by **SHG** as part of Commonwealth condition requirements (EPBC 2013/7075).

3.4. Flora Survey Methodology

The clearing sites were surveyed using the preferred timed meander survey technique as per *Flora Survey Guidelines* – *Protected Plants Nature Conservation Act 1992* by two (2) suitably qualified professionals including (1) Senior Ecologists and one (1) Ecologist (refer to **Appendix C** for curricula vitae). Surveys were carried out as follows:

- 1) The Clearing Impact Area was traversed on foot by project Ecologists (refer to **Plan 4**).
- 2) The start and finish time of each meander was recorded.
- 3) The track log of project Ecologist's transects was recorded using a handheld GPS unit accurate to < 1m.
- 4) The identity of all plant species encountered during each meander was recorded.
- 5) The site and surrounds were photographed.

Flora Survey Results

The Clearing Impact Areas for the V13 Basin and V15 were assessed on the 1st and 2nd March 2017. No EVNT species were encountered in the clearing impact area. Given the extent of survey it can be stated with a very high level of confidence that no EVNT species will be cleared by the proposed development.

Two vegetation transects were completed with a combined length of 19, 064 meters by two ecologists using the meander methods. This method allowed for coverage of the entire investigation area and included all habitat niches observed, including rock outcrops, mapped waterways and a variety of regional ecosystem communities.

Table 4 summarises the details of each of the timed meander transect. Meander transect descriptions with photographs are presented in the following pages. A general description for the transect area is provided in this section and respective species lists in **Appendix D**.

Table 4: Meander survey summary

Transect	Date	Start Time	Finish Time	Duration	Distance	Flora Species
1(a)	1.03.2017	12:35	15:40	6 hours, 10 minutes	11088m	65
1(b)	2.03.2017	9:30	10:30	2 hour	3090m	
2	2.03.2017	8:00	9:23	2 hour, 46 minutes	4886m	72

4.1. Meander Transect I (Village I5)

Transect 1 is located within mapped remnant vegetation dominated by Least Concern regional ecosystem 12.9-10.17 and 12.9-10.19a and contains areas of composite Of Concern RE12.9-10.2/12.9-10.7/12.9-10.19. The western boundary of the survey included a mapped waterway containing Least Concern RE12.9-10.17a. These communities are described below:

- 12.9-10.17a: Lophostemon confertus or Lophostemon suaveolens dominated open forest usually with emergent Eucalyptus and/or Corymbia species. Occurs in gullies and southern slopes on Cainozoic and Mesozoic sediments
- 12.9-10.19a: Corymbia henryi +/- Eucalyptus fibrosa subsp. Fibrosa, Corymbia citriodora subsp. variegate, Eucalyptus siderophloia, Eucalyptus crebra open forest. Occurs in coastal areas on Cainozoic and Mesozoic
- **12.9-10.2:** Corymbia citriodora subsp. variegata open forest or woodland usually with Eucalyptus crebra. Other species such as Eucalyptus tereticornis, E. moluccana, E. acmenoides and E. siderophloia may be present in scattered patches or in low densities. Understorey can be grassy or shrubby. Shrubby understorey of Lophostemon confertus (whipstick form) often present in northern parts of bioregion. Occurs on Cainozoic and
- 12.9-10.7: Eucalyptus crebra +/- E. tereticornis, Corymbia tessellaris, Angophora leiocarpa, E. melanophloia woodland. Occurs on Cainozoic and Mesozoic sediments

• **12.9-10.19:** Eucalyptus fibrosa subsp. fibrosa woodland +/- Corymbia citriodora subsp. variegata, E. acmenoides or E. portuensis, Angophora leiocarpa, E. major. Understorey often sparse. Localised occurrences of Eucalyptus sideroxylon. Occurs on Cainozoic and Mesozoic sediments.

The transect survey included investigations along 14,178m and included a variety of regional ecosystem communities a mapped waterway as well as environmental niches such as rock outcrops.

This transect traversed throughout the mapped remnant vegetation with the majority of the meander located on the western facing slope, the mapped waterway and the lower eastern facing slope within the same regional ecosystem communities. The mapped waterway is highly infested with weeds, particularly *Lantana camara* (Lantana) however also retains an increased density of *Lophostemon suaveolens* (Swamp Box) and a number of scattered *Eucalyptus tereticornis* (Forest Red Gum) specimens. The area containing *Lantana camara* contained very few native flora species within the ground layer.

The ridgelines and slopes within the assessment area contained a mix of Corymbia and Eucalypt species with patches of dense understorey of Acacia species, particularly *Acacia leiocalyx* (Early Flowering Black Wattle). These increased densities appeared to be a result of past intensive fire periods. Rock outcrops were observed along this ridgeline running north south and were targeted during the field the survey due to these areas being preferred habitat for a number of the listed flora species including *Plectranthus harbrophyllus* (Plectranthus) and *Marsdenia coronata* (Slender Milk Vine).

Sixty five (65) flora species were recorded throughout the transect area, all of which are listed as common under state and federal legislation.

Photo: Transect 1 waterway areas dominated by dense Lantana camara (Lantana)

Photo: Transect 1 rock outcrops within the ridgeline areas observed along western facing slope.

Photo: Transect 1 included patches of dense Acacia leiocalyx as a result of past fire periods.

4.2. Meander Transect 2 (Village I3)

Transect 2 is located within mapped remnant vegetation mapped as containing a composite Of Concern regional ecosystem community containing RE12.9-10.2/12.9-10.7/12.9-10.19. The southern boundary of the survey also included the same mapped waterway as what was surveyed within Transect 1 however further downstream, and is mapped as containing Least Concern RE12.9-10.17a. Vegetation recorded throughout the survey period appeared to be consistent with the current regional ecosystem mapping. These communities are described below:

- **12.9-10.17a:** Lophostemon confertus or Lophostemon suaveolens dominated open forest usually with emergent Eucalyptus and/or Corymbia species. Occurs in gullies and southern slopes on Cainozoic and Mesozoic sediments
- **12.9-10.19a:** Corymbia henryi +/- Eucalyptus fibrosa subsp. Fibrosa, Corymbia citriodora subsp. variegate, Eucalyptus siderophloia, Eucalyptus crebra open forest. Occurs in coastal areas on Cainozoic and Mesozoic sediments.
- 12.9-10.2: Corymbia citriodora subsp. variegata open forest or woodland usually with Eucalyptus crebra. Other species such as Eucalyptus tereticornis, E. moluccana, E. acmenoides and E. siderophloia may be present in scattered patches or in low densities. Understorey can be grassy or shrubby. Shrubby understorey of Lophostemon confertus (whipstick form) often present in northern parts of bioregion. Occurs on Cainozoic and Mesozoic sediments
- **12.9-10.7:** Eucalyptus crebra +/- E. tereticornis, Corymbia tessellaris, Angophora leiocarpa, E. melanophloia woodland. Occurs on Cainozoic and Mesozoic sediments
- **12.9-10.19:** Eucalyptus fibrosa subsp. fibrosa woodland +/- Corymbia citriodora subsp. variegata, E. acmenoides or E. portuensis, Angophora leiocarpa, E. major. Understorey often sparse. Localised occurrences of Eucalyptus sideroxylon. Occurs on Cainozoic and Mesozoic sediments.

The transect survey included investigations along 4886 meters by two experienced ecologists.

This transect traversed throughout the mapped remnant vegetation with the majority of the meander located on the southern facing slope and the mapped waterway. Directly south of the investigation area has recently been cleared as part of the broader Springfield development. The construction of Sinnathamby Blvd has also resulted in the inundation of a portion of the investigation area. This is evident with a large number of dead Eucalypt stags still standing within the inundated area. Overland flow paths and drainage features running down the western facing slope are highly infested with introduced species, particularly *Lantana camara* (Lantana).

Vegetation throughout the whole polygon is dominated by Eucalypt and Corymbia species with weeds largely confined to the shrub and ground layers. A small area within the central portion of the polygon contains exposed rocky outcrop, with particular attention paid to the listed flora species *Plectranthus harbrophyllus* (Plectranthus) and *Marsdenia coronata* (Slender Milk Vine).

The majority of the assessment area contained a mix of Corymbia and Eucalypt species and is described as lower slopes. No ridge lines occur within this investigation transect. Small patches of thick Acacia including *Acacia leiocalyx* (Early Flowering Black Wattle) and *Acacia fimbriata* (Fringed Wattle) were observed throughout the transect, however, the majority of the polygon contained relatively sparse understorey.

Seventy two (72) flora species were recorded throughout the transect area, all of which are listed as common under state and federal legislation.

Photo: Transect 2 waterway areas dominated by dense Lantana camara (Lantana)

Photo: Transect 2 rocky outcrops within the ridgeline areas.

Photo: Transect 2 Steep south facing slope.

4.3. Summary

Field surveys were carried out within the clearing impact area and buffer of early works precincts (Village 13 Basin and Village 15) of the Springfield Rise project site which is mapped as 'High Risk' by Protected Plants Flora Survey Trigger Mapping. The survey utilised the preferred random meander technique as outlined in the *Flora Survey Guidelines – Protected Plants Nature Conservation Act 1992* to identify the presence of EVNT species. Coverage included the proposed clearing extents as well as a 100 m buffer. A single meander transect as well as continual observations were completed throughout the investigation area. It is noted that access was heavily impeded by dense Lantana infestations.

The following points provide a summary of the investigation area:

- The vegetation communities observed have been extensively searched and analysed against current regional ecosystem mapping with overall consistencies in the location of each regional ecosystem community. Some minor variations were observed however in the majority of areas these variations are too small to provide for changes to this mapping.
- The majority of the canopy layer of the Clearing Impact Area reflects relatively intact representing an open forest to woodland community. Although evidence of forestry practices was recorded in all transects and throughout observational survey points, the site remains as remnant due to the vegetation community's height and density.
- The sub-canopy layer is relatively sparse throughout the majority of the site and is typical of the mapped vegetation communities represented on site.
- The understorey layer is variable with some patches along ridgelines containing dense acacia regrowth and the VMA mapped waterway containing a relatively sparse native flora layer. The dense infestations of acacia indicate evidence of historical fire events. Old cut stumps throughout the area also indicate historical logging practices.
- Dense weed infestation was observed throughout the mapped waterways and drainage lines. Low to moderate infestation were observed on the lower slopes of the ridgelines with only sparse infestations on the higher part of the ridges.
- Exposed rocky habitat was recorded in isolated patches along ridgelines. Although these areas have been
 extensively searched, no threatened species were recorded at the time of the assessment within the
 investigation area.

Surveys did not identify any EVNT species within the proposed clearing areas or the 100m buffer..

Summary

Matters of National Environmental Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the <u>Administrative Guidelines on Significance</u>.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance:	1
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Listed Threatened Ecological Communities:	2
Listed Threatened Species:	59
Listed Migratory Species:	27

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at http://www.environment.gov.au/heritage

A <u>permit</u> may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Land:	1
Commonwealth Heritage Places:	1
Listed Marine Species:	38
Whales and Other Cetaceans:	1
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Commonwealth Reserves Marine:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have nominated.

State and Territory Reserves:	2

Extra Information

State and Territory Reserves	[Resource Information]
Name	State
Stewartdale	QLD
White Rock	QLD

Invasive Species [Resource Information]

Weeds reported here are the 20 species of national significance (WoNS), along with other introduced plants that are considered by the States and Territories to pose a particularly significant threat to biodiversity. The following feral animals are reported: Goat, Red Fox, Cat, Rabbit, Pig, Water Buffalo and Cane Toad. Maps from Landscape Health Project, National Land and Water Resouces Audit, 2001.

Name	Status	Type of Presence
Birds		
Acridotheres tristis Common Myna, Indian Myna [387]		Species or species habitat likely to occur within area
Anas platyrhynchos Mallard [974]		Species or species habitat likely to occur within area
Carduelis carduelis European Goldfinch [403]		Species or species habitat likely to occur within area
Columba livia Rock Pigeon, Rock Dove, Domestic Pigeon [803]		Species or species habitat likely to occur within area
Lonchura punctulata Nutmeg Mannikin [399]		Species or species habitat likely to occur within area
Passer domesticus House Sparrow [405]		Species or species habitat likely to occur within area
Streptopelia chinensis Spotted Turtle-Dove [780]		Species or species habitat likely to occur within area
Sturnus vulgaris Common Starling [389]		Species or species habitat likely to occur within area
Frogs		
Rhinella marina Cane Toad [83218]		Species or species habitat likely to occur within area
Mammals		
Bos taurus		
Domestic Cattle [16]		Species or species habitat likely to occur within area
Canis lupus familiaris Domestic Dog [82654]		Species or species habitat likely to occur within area
Equus caballus Horse [5]		Species or species habitat likely to occur within area
Felis catus Cat, House Cat, Domestic Cat [19]		Species or species habitat likely to occur within area

Name	Status	Type of Presence
Feral deer		
Feral deer species in Australia [85733]		Species or species habitat likely to occur within area
Lepus capensis Brown Hare [127]		Species or species habitat likely to occur within area
Mus musculus House Mouse [120]		Species or species habitat
Oryctolagus cuniculus		likely to occur within area
Rabbit, European Rabbit [128]		Species or species habitat likely to occur within area
Rattus norvegicus Brown Rat, Norway Rat [83]		Species or species habitat likely to occur within area
Rattus rattus Black Rat, Ship Rat [84]		Species or species habitat likely to occur within area
Sus scrofa Pig [6]		Species or species habitat likely to occur within area
Vulpes vulpes Red Fox, Fox [18]		Species or species habitat likely to occur within area
Plants		
Anredera cordifolia		
Madeira Vine, Jalap, Lamb's-tail, Mignonette Vine, Anredera, Gulf Madeiravine, Heartleaf Madeiravine, Potato Vine [2643] Asparagus aethiopicus		Species or species habitat likely to occur within area
Asparagus Fern, Ground Asparagus, Basket Fern, Sprengi's Fern, Bushy Asparagus, Emerald Asparagus [62425] Asparagus africanus		Species or species habitat likely to occur within area
Climbing Asparagus, Climbing Asparagus Fern [66907]		Species or species habitat likely to occur within area
Asparagus plumosus Climbing Asparagus-fern [48993]		Species or species habitat likely to occur within area
Cabomba caroliniana Cabomba, Fanwort, Carolina Watershield, Fish Grass, Washington Grass, Watershield, Carolina Fanwort, Common Cabomba [5171]		Species or species habitat likely to occur within area
Chrysanthemoides monilifera Bitou Bush, Boneseed [18983]		Species or species habitat may occur within area
Dolichandra unguis-cati Cat's Claw Vine, Yellow Trumpet Vine, Cat's Claw Creeper, Funnel Creeper [85119]		Species or species habitat likely to occur within area
Eichhornia crassipes Water Hyacinth, Water Orchid, Nile Lily [13466]		Species or species habitat likely to occur within area
Genista monspessulana Montpellier Broom, Cape Broom, Canary Broom, Common Broom, French Broom, Soft Broom [20126]		Species or species habitat likely to occur within area
Lantana camara Lantana, Common Lantana, Kamara Lantana, Large- leaf Lantana, Pink Flowered Lantana, Red Flowered Lantana, Red-Flowered Sage, White		Species or species habitat likely to occur within area

Name	Status	Type of Presence
Sage, Wild Sage [10892]		
Opuntia spp. Prickly Pears [82753]		Species or species habitat likely to occur within area
Parkinsonia aculeata Parkinsonia, Jerusalem Thorn, Jelly Bean Tree, Bean [12301]	Horse	Species or species habitat likely to occur within area
Parthenium hysterophorus Parthenium Weed, Bitter Weed, Carrot Grass, Fa Ragweed [19566]	alse	Species or species habitat likely to occur within area
Protasparagus densiflorus Asparagus Fern, Plume Asparagus [5015]		Species or species habitat likely to occur within area
Protasparagus plumosus Climbing Asparagus-fern, Ferny Asparagus [117	47]	Species or species habitat likely to occur within area
Sagittaria platyphylla Delta Arrowhead, Arrowhead, Slender Arrowhea [68483]	d	Species or species habitat likely to occur within area
Salix spp. except S.babylonica, S.x calodendron Willows except Weeping Willow, Pussy Willow as Sterile Pussy Willow [68497]		Species or species habitat likely to occur within area
Salvinia molesta Salvinia, Giant Salvinia, Aquarium Watermoss, K Weed [13665]	Kariba	Species or species habitat likely to occur within area
Senecio madagascariensis Fireweed, Madagascar Ragwort, Madagascar Groundsel [2624]		Species or species habitat likely to occur within area
Solanum elaeagnifolium Silver Nightshade, Silver-leaved Nightshade, Wh Horse Nettle, Silver-leaf Nightshade, Tomato We White Nightshade, Bull-nettle, Prairie-berry, Satansbos, Silver-leaf Bitter-apple, Silverleaf-net Trompillo [12323]	eed,	Species or species habitat likely to occur within area
Reptiles		
Hemidactylus frenatus Asian House Gecko [1708]		Species or species habitat likely to occur within area
Nationally Important Wetlands		[Resource Information]

Greenbank Army Training Area C		QLD

Caveat

The information presented in this report has been provided by a range of data sources as acknowledged at the end of the report.

This report is designed to assist in identifying the locations of places which may be relevant in determining obligations under the Environment Protection and Biodiversity Conservation Act 1999. It holds mapped locations of World and National Heritage properties, Wetlands of International and National Importance, Commonwealth and State/Territory reserves, listed threatened, migratory and marine species and listed threatened ecological communities. Mapping of Commonwealth land is not complete at this stage. Maps have been collated from a range of sources at various resolutions.

Not all species listed under the EPBC Act have been mapped (see below) and therefore a report is a general guide only. Where available data supports mapping, the type of presence that can be determined from the data is indicated in general terms. People using this information in making a referral may need to consider the gualifications below and may need to seek and consider other information sources.

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species distributions have been derived through a variety of methods. Where distributions are well known and if time permits, maps are derived using either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc) together with point locations and described habitat; or environmental modelling (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where very little information is available for species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc). In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More reliable distribution mapping methods are used to update these distributions as time permits.

Only selected species covered by the following provisions of the EPBC Act have been mapped:

- migratory and
- marine

The following species and ecological communities have not been mapped and do not appear in reports produced from this database:

- threatened species listed as extinct or considered as vagrants
- some species and ecological communities that have only recently been listed
- some terrestrial species that overfly the Commonwealth marine area
- migratory species that are very widespread, vagrant, or only occur in small numbers

The following groups have been mapped, but may not cover the complete distribution of the species:

- non-threatened seabirds which have only been mapped for recorded breeding sites
- seals which have only been mapped for breeding sites near the Australian continent

Such breeding sites may be important for the protection of the Commonwealth Marine environment.

Curricula Vitae – Pen Port

Andrew Craig: Senior Ecologist

Andrew is a senior field ecologist with significant practical experience in the areas of ecological site assessment, weed management programs, large scale revegetation projects, wetland rehabilitation and waterway restoration. His main area of expertise is the identification and classification of flora and fauna including the identification and management of threatened species and communities. Andrew has significant experience in some of Queensland's largest infrastructure projects including coordinating on-ground flora assessments and development of weed management and rehabilitation strategies for the Southern Regional Water Pipeline.

Andrew's background in managing revegetation, translocation and forestry establishment projects brings a wealth of experience in the practical management, rehabilitation and offsetting across numerous projects. These skills linked with strong scientific and analytical site survey methods ensures Saunders Havill Group complies with all necessary state and federal government sampling procedures.

Qualifications

Bachelor of Science (Zoology), The University of Queensland (1997)

Maree Clancy: Ecologist

Maree has extensive ecological field and desktop research experience gained while working in the forestry industry and with the Australian Koala Foundation. In previous roles she assisted with quarterly and annual reporting of rehabilitation/revegetation works at residential development reserves, habitat translocation sites and the Bruce Highway upgrade project, and also with annual fauna surveying and reporting on various projects. She has a wealth of experience with preliminary desktop assessments of potential species at survey sites and the identification of flora and fauna species present during surveys.

At the Australian Koala Foundation, Maree was involved in the Koala habitat mapping project which included the use of GIS and determining habitat values for regional ecosystems and mosaics based on canopy species rankings and percentage composition.

Maree has additional skills in native seed propagation and growing of seedlings for large scale revegetation and farm forestry projects, ongoing monitoring of propagation methods and plant health status and adaptive approaches to improving methods.

Qualifications

Bachelor of Environmental Science, University of the Sunshine Coast (2014)

Appendix E

Species Lists

Flora Species Transect 1 (Village 15)		
Species	Common Name	
Acacia concurrens	Black Wattle	
Acacia disparrima	Hickory Wattle	
Acacia fimbriata	Fringed Wattle	
Acacia leiocalyx	Early Flowering Black Wattle	
Adiantum atroviride	Maiden Hair Fern	
Ageratum houstonianum	Blue Billy Goat Weed	
Allocasuarina littoralis	Black She Oak	
Alphitonia excelsa	Soap Tree	
Angophora leiocarpa	Smooth Bark Apple	
Aristida latifolia	Many Head Wire Grass	
Celtis sensis	Chinese Elm	
Chloris gayana	Rhodes Grass	
Chrysocephalum apiculatum	Yellow Buttons	
Conyza sumatrensis	Tall Fleabane	
Corymbia citriodora	Spotted Gum	
Corymbia intermedia	Pink Bloodwood	
Corymbia tessellaris	Moreton Bay Ash	
Corymbia torreliana	Cadaghi	
Corymbia trachyphloia	Brown Bloodwood	
Cuscuta campestris	Dodder Vine	
Cymbopogan refractus	Barbed Wire Grass	
Dianella careulea	Blue Lilly	
Dichondra repens	Kydney Weed	
Dodonaea triquetra	Forest Hop Bush	
Dodonaea viscosa	Hop Bush	
Eragrostis brownii	Browns Love Grass	
Eremophila debilis	Winter Apple	
Eucalyptus acmenoides	White Mahogany	
Eucalyptus fibrosa	Broad Leaf Ironbark	
Eucalyptus microcorys	Tallowwood	
Eucalyptus seeana	Narrow Leaf Red Gum	
Eucalyptus siderophloia	Grey Ironbark	
Eucalyptus tereticornis	Forest Red Gum	

Eustrephus latifolius	Wombat Berry
Gahnia asperia	Saw Sedge
Glochidion ferdinandi	Cheese Tree
Glossocardia bidens	Native Cobblers Pegs
Goodenia rotundifolia	Goodenia
Grewia latifolia	Dogs Balls
Hardenbergia violacea	Native Sarsparilla
Hetropogon conturtus	Black Spear Grass
Imperata cylindrica	Blady Grass
Jacksonia scoparia	Dogwood
Lantana camara	Lantana
Lantana montevidensis	Creeping Lantana
Lepidosperma	Lemon Scented Myrtle
Leucopogon juniperinus	Prickly Heath
Lobelia purpurascens	White Root
Lomandra longifolia	Mat Rush
Lomandra multiflora	Many Flowered Mat Rush
Lophostemon confertus	Brush Box
Lophostemon suaveolens	Swamp Box
Melinis repens	Red Natal Grass
Neonotonia wightii	Glycine
Nephrolepis	Fish Bone Fern
Passiflora suberosa	Corky Passion Vine
Petalostigma pubescens	Quinine Bush
Plectranthus parviflorus	Plectranthus
Pteridium esculentum	Bracken Fern
Setaria sphacelata	Setaria
Sida cordifolia	Flannel Weed
Smilax australis	Barbed Wire Vine
Themeda triandra	Kangaroo Grass
Vigna vexillata	Wild Cowpea
Xanthorrhoea glauca	Grass Tree

Eucalyptus mollucana
Eucalyptus siderophloia

Eucalyptus terticornis

Eustrephus latifolius

Lantana montevidensis	Creeping Lantana
Lepidosperma laterale	Variable Sword Sedge
Leucopogon juniperinus	Prickly Heath
Lobelia purpurascens	White Root
Lomandra longifolia	Mat Rush
Lomandra multiflora	Many Flowered Mat Rush
Lophostemon confertus	Brush Box
Lophostemon suaveolens	Swamp Box
Megathyrsus maximus	Guinea Grass
Melaleuca quinquenervia	Broad Leaf Paperbark
Melinis repens	Red Natal Grass
Oplismenus aemulus	Creeping Beard Grass
Opuntia tomentosa	Prickly Pear
Parsonsia straminea Monkey Rope	
Passiflora suberosa	Corky Passion Flower
Pennisetum purpureum	Elephant Grass
Persicaria decipiens	Slender Knot Weed
Philydrum lanuginosum	Woolly Frogmouth
Plectranthus parviflorus	Plectranthus
Pomax umbellata	Pomax
Pteridium esculentum	Bracken Fern
Rubusparvifolius	Pink Flowered Native Raspberry
Sesbania cannabina	Yellow Pea Bush
Setaria sphacelata	Setaria
Smilax australis	Barbed Wire Vine
Solanum mauritianum	Wild Tobacco
Solanum sp.	Potato Bush
Solanum torvum	Devils Fig
Sporobolus pyramidalis	Giant Rat's Tail Grass
Stephania japonica	Tape Vine

Themeda triandra	Kangaroo Grass
Trema tomentosa	Poison Peach
Typha sp.	Bull Rush
Vigna vexillata	Wild Cowpea

Springfield Rise: V15 – Plectanthus habrophyllus pre-clearance survey, 7002 Grande Avenue, Springfield (Lot 200 on SP284567)

Dear lan,

This letter provides confirmation that the *Environmental Management Division* of **Saunders Havill Group** was engaged by **Lendlease Communities** to undertake a pre-clearance survey for *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) threatened flora species *Plectanthus habrophyllus* within the proposed clearing extent for the V15 – Phase 1 preliminary bulk earthworks area to meet Condition 6 of the EPBC Act approval (Ref: 2013/7057).

No *Plectanthus habrophyllus* populations were previously recorded in close proximity to the works area as part of the Spring Mountain EPBC survey by **Yurrah** (refer to **Attachment 2**). Further, no *Plectanthus habrophyllus* specimens were recorded within the V15 clearing extent (refer to **Attachment 1** for a copy of the clearing extent).

The following provides relevant details of the survey:

Applicant: Lend Lease Communities (Springfield) Pty Ltd

Site Details: 7002 Grande Avenue, Springfield (Lot 200 on SP283567)

Development Area: Springfield Rise V15

Plectanthus habrophyllus Pre-Clearance Survey Results:

Survey Completed by: David Havill (Senior Ecologist) & Maree Clancy (Ecologist)

Survey Completion Date: 27th February 2017

Was the survey undertaken in accordance with EPBC Act survey guidelines? Yes
Were any <u>Plectanthus habrophyllus</u> specimens identified within the clearing area? No

Kind regards,/

Murray Saunders

1. Introduction

1.1 Project Background

Queensland Fauna Consultancy Pty Ltd has been engaged by Shadforths Civil Contractors to prepare a Fauna Spotter Catcher Wildlife and Habitat Impact Mitigation Plan for Village 15 as part of the Springfield Rise Project, Spring Mountain, Queensland.

The objective of this report is to summarise the existing fauna values presented in the Fauna Spotter Catcher Pre-Clearance Survey and Wildlife Protection and Management Plan (WPMP) and assign mitigatory strategies applicable to probable species likely to be encountered during the clearing of identified habitats throughout or within specific localities of the site. Fauna species both common and of elevated conservation value have been considered within the parameters of onsite investigations and, where provided to QFC, include review of current fauna and floristic reports that may influence the assemblages expected to utilise the microhabitats evident within the site.

This review encompasses species identified under the provisions of the Commonwealth Environment Protection and Biodiversity Conservation Act 1999 and the Queensland Nature Conservation Act 1992. Further consideration is given, where applicable, to species of iconic, cultural and/or regional significance identified under commonwealth, state or local planning instruments aimed at the persistence of biodiversity values within the area.

1.2 Project Location and Site Description

Village 15 is located in the central portion of the Springfield Rise precinct, and, in conjunction with Villages 11, 12 and 13 and 14, defines the key intersection of the Grand Avenue extension and the Major Collector linking into the Town Centre. Village 15 is will adjoin a wildlife/vegetation corridor along the western boundary.

Existing features exhibit primarily a woodland vegetative complex with drainage features present due to an undulating topography. Dominant trees species across several vegetation types include *Eucalyptus, Corymbia, Angophora* and *Lophostemon* species.

Map 1: Project Location

(Image extracted from Springfield Rise at Spring Mountain Concept Masterplan, LandPartners 2016)

1.3 Current Permits and Authorities

All activities conducted during the site investigations were implemented under the provisions of a number of permits issued to Queensland Fauna Consultancy Pty Ltd by the Department of Environment and Heritage Protection (DEHP) formerly the Department of Environment and Resource Management and the Department of Employment, Economic Development and Innovation (DEEDI). These permits and additional authorities are listed in *Table 1*.

Table 1: Current Permits and authorities issued to QFC

Permit/Authorisation	Permit Number	Expiry Date
Damage Mitigation Permit	WIMP17840916	5 th December 2019
Rehabilitation Permit	WIRP15052614	10 th September 2017
Scientific User Registration Registration Number 589		27 th February 2019
Animal Ethics CA 2016/01/939		27 th February 2019

These permits and approvals enable QFC to conduct the investigation, observation and relocation of protected animals exposed to disturbance due to infrastructure expansion resulting in the destruction of natural and artificial habitats.

2. Mitigation Strategies

2.1 Fauna Spotter

It is advised that all identified fauna habitats onsite be inspected by a licensed Fauna Spotter prior to vegetation clearing, and all vegetation removal activities be supervised during the clearing process.

2.2 Clearing Methodologies

In accordance to the *Nature Conservation (Koala) Conservation Plan 2006 and Management Program 2006-2016* the following sequential clearing conditions are required to be adhered to:

- Clearing of trees is carried out in a way that ensures koalas living in or near the area being cleared (the clearing site) have enough time to move out of the clearing site without human intervention, including in particular, for a clearing site with an area of more than 6ha, by:
 - o Carrying out the clearing in stages; and
 - o Ensuring not more than the following is cleared in any one stage:
 - for a clearing site with an area of 6 ha or less—50 percent of the site's area:
 - for a clearing site with an area of more than 6ha—3ha or 3 percent of the site's area, whichever is the greater; and
 - Ensuring that between each stage there is at least one period of 12 hours that starts at 6 p.m. on a day and ends at 6 a.m. on the following day, during which no trees are cleared on the site;

In addition to these measures it is recommended that clearing activities be undertaken in a directional manner specified by the fauna spotter/catcher. This is done to reduce the likelihood of negative interactions between fauna and potential hazards e.g. roads and traffic, prevent isolation of fauna through habitat fragmentation, and to ensure that natural dispersal of wildlife away from clearing activities is not impeded.

A plan detailing the clearing direction within Village 15 can be viewed in Appendix A. This involves directional clearing towards the Mountain Creek Corridor to the west and south toward the Spring Mountain Offset zone, both of which have been earmarked as safe haven zones for fauna movement and connectivity (Saunders Havill Group, 2016). This approach is supported by QFC as the most applicable response to managing highly mobile fauna.

2.3 Fauna Fencing

Temporary fencing has already been installed and will aid in minimizing the movement of large fauna including highly mobile macropods into the existing Tea Trees Estate. The addition of further fauna fencing may be required if site conditions change and fauna considerations are presented by the fauna spotter catcher.

2.4 Felling Procedures

Trees identified as having potential fauna values (such as hollows, arboreal termitaria and exfoliating bark) will be clearly identified and subsequently marked for supervision during felling and inspected once felled. Efforts will be made to determine potentially occupant species by way of investigations for indicative signs (scats, scratchings and tracks) on the day(s) of clearing. Where no signs are found or potentially occupant species are undeterminable, machinery operators will be instructed to fell trees in a manner directed at minimising the potential risk of injury to fauna.

All identified microhabitats will be inspected via ground based observation and the direction of felling will be determined considering the safety of personnel, machinery and potentially occupant fauna. Felling procedures will see implementation of a soft felling technique specifically constructed by QFC to achieve minimal deceleration and impact upon felling. This will be achieved under direction of the Fauna Spotter present directly communicating with the plant operator(s).

2.5 Macropods

Macropods have been observed on adjacent sites and other signs including macropod scat and footprints have been located throughout the clearing precinct, as well as in areas adjacent to site.

The area of proposed clearing activities exhibits direct connectivity to notable habitat values along the western border, therefore, if clearing commences in a directional and incremental fashion any macropods potentially encountered on site may move on of their own volition. In this event, it is recommended that clearing proceed as already recommended with continual reassessment by the onsite fauna spotters.

2.6 Aquatic Fauna

It is not envisaged that aquatic dewatering activities will be required within the proposed clearing area; however pooled water and drainage features (if present) will be inspected during terrestrial load reduction activities ahead of the clearing front. The following recommendations are made to mitigate impacts to potentially occupant fauna:

- Inspection of banks, peripheral vegetation and other immediate terrestrial microhabitats;
- Identification of potential fauna values including: logs, rocks, artificial structures, discarded rubbish and burrows;
- Targeted searched for frog egg deposition sites on debris, bank edges, water surface and vegetation.

2.7 General Terrestrial and Arboreal Fauna

Overall the site contains medium value refugial opportunities for arboreal and terrestrial fauna species. The species expected within the site are likely to primarily reflect common fauna assemblages for the region however provisions are proposed directly for common fauna and species of conservation significance.

It is advised that all identified fauna habitats onsite be inspected by a DEHP approved Fauna Spotter prior to vegetation clearing and all vegetation removal activities be supervised during the clearing process. Terrestrial load reduction activities will be conducted ahead of the clearing front where possible. Fauna captured will be relocated to adjacent habitat consistent with the life history requirements of the species requiring translocation. Further it is recommended habitat boxes, as identified in the WPMP, be removed and reinstalled if deemed appropriate by the fauna spotter catcher.

2.8 EVNT Fauna

It is not envisaged that any species, listed under the provisions of the *Environment Protection and Biodiversity Conservation Act 1999* or the *Nature Conservation Act 1992*, other than those listed in the WPMP, will require specific management during vegetation clearing activities.

However, specific management for those identified EVNT species will include targeted investigations immediately prior to vegetation removal activities on each day of clearing and subsequently whilst clearing takes place. Preliminary investigations will be supported by additional monitoring applied during clearing activities with a designated fauna spotter operating with each machine actively involved in vegetation or identified habitat disturbance. These should include the following:

Koala:

As favoured Koala food trees on site exceed a diameter of 100mm at 1.3 metres from the ground, requirements under the Koala Plan's 'Koala Habitat Area' provisions trigger the need for inspection and monitoring during vegetation clearing by a qualified Fauna Spotter.

Historically known to occur within the area the Koala will feature highly in daily search efforts with a dedicated and detailed methodology employed as follows:

- Pre-clearing (preliminary) investigations to be conducted specifically for Koala detection by one experienced fauna spotter a minimum half hour prior to works each day. The investigation will embrace all designated clearing zones identified for that day inclusive of a 25-metre buffer around that zone;
- Once clearing commences a fauna spotter will accompany each machine providing continuous verification of habitat values and potential identification of undetected koalas ahead of operating plant. This will also account for potentially transient Koalas that may enter the site after preliminary investigations are complete.

Direct observational methodology will include the following components

- Use of binoculars to inspect the crown, forks and trunk of trees for individuals currently occupying the site;
- 'Drip zone' searches at the base of known food trees for the presence of scats to a radius equal to that of the crown of individual trees;
- Inspection of trunks for scratchings indicative of use by Koalas;
- Repeat observations made of single trees from numerous angles at repeated times throughout the clearing activities by the assigned fauna spotter.

In the event a Koala is detected; the Fauna Spotter will determine the appropriate course of action with exclusion zones implemented and alterations to the clearing plan discussed with the Site Supervisor. Once defined, these directions will be communicated to the plant operators and clearing will proceed in accordance with the recommendations made.

Changes to Koala management strategies highlighted in the *Nature Conservation (Koala) Conservation Plan 2006 and Management Program 2006-2016* have resulted in particular conditions placed on vegetation clearance involving the removal of Koala food trees. These provisions entail an increased responsibility by developers and land clearance operators alike to ensure the welfare of potentially present Koalas in areas identified as having significance for the persistence of this species.

Where significance under planning instruments is assigned provisions may include the restriction of all clearance that directly interferes with any tree a Koala is residing in or surrounding trees that, when felled, may impact on the crown of the host tree. Koalas are to leave via their own volition through a corridor designated by the Fauna Spotter to the closest remaining suitable habitat.

Throughout this time the Koala may not be interfered with by any means unless special dispensation has been sought through the appropriate government body or where the Koala is evidently in a state of compromised health. Only when Koalas have vacated a tree can clearance operations include the identified host tree and surrounding vegetation which composes the established exclusion zone. Recommendations made by the Fauna Spotter on site will embrace these provisions.

Grey-headed Flying Fox:

Although no Flying Fox camps or roosts were noted during the site survey, the transient nature of this species and the abundance of available feeding resources would see probability for the species to intermittently utilise the site.

The following recommendations are made for management of potentially occurring Grey-headed Flying Fox:

- Daily Inspection of trees assigned for removal be conducted to detect potential roosting Flying Foxes;
- Trees found to contain roosting Flying Foxes to be left standing and re assessed at the end
 of each days clearing. Being a transient species, the disturbance associated by the
 surrounding clearing is likely to see individuals fly off via its own volition come nightfall and
 not return the following morning, thus negating the need for direct disturbance.

Spotted-tail Quoll:

Although no dens or further evidence of Spotted-tail Quoll activity was detected during the survey, the species is known to occur historically in low densities in proximity to the site. Geomorphic structure and topography are considered favourable resulting in the following recommendations for further mitigation during the clearing activity:

- Inspection daily of identified geomorphic structure such as large boulders and rock accumulates, large hollow ground logs and log stock piles;
- Monitored dismantling of identified microhabitats by fauna spotters with machinery assistance.

Greater Glider:

The site contains hollow-bearing trees with the potential to support den localities for the Greater Glider. Suitable feeding resources are highly available given the availability of *Eucalyptus* leaves; on which the Greater Glider almost exclusively feeds on. The following recommendations are made for management of potentially occurring Greater Glider;

- Basal and drip zone searches for scats indicative of the presence of Greater Glider;
- Inspection daily of trees assigned for removal in areas of likely occurrence to detect Great Glider;
- Implementation of a soft felling technique where trees are determined to have potential for occupancy.

Powerful Owl:

The site contains hollowing bearing trees with the potential to support nesting localities for the Powerful Owl. Diurnal roosting opportunities are afforded however these are considered only moderately favourable. Feeding resources would be available as highly targeted species such as glider and possum species are common throughout the region.

The following recommendations are made for management of potentially occurring Powerful Owl;

- Inspection daily of trees assigned for removal in areas of likely occurrence to detect potentially roosting birds;
- Identification of hollows exhibiting suitable dimensions for use as a nesting resource;
- Ground searches for casts and faecal accumulates indicative of the presence of Powerful Owl roosting and nesting sites;
- Implementation of a soft felling technique where trees are determined to have potential for occupancy.

Rufous Fantail:

The site contains preferred habitat types with the potential to support nesting localities for the Rufous Fantail. However, nesting sites unlikely given the time of year.

The following recommendations are made for management of potentially occurring Rufous Fantail:

- Inspection daily of trees assigned for removal in areas of likely occurrence to detect potentially roosting birds;
- Observation of mature birds to ensure individuals are out of immediate felling zones;
- Implementation of a soft felling technique where trees are determined to have potential nests.

Collared Delma:

The presence of rocky habitat combined with *Eucalyptus* dominated woodlands presents known favorable habitat for the Collared Delma. The following recommendations are made for mitigation during clearing activity:

- Inspection daily of identified geomorphic structures including rocky outcrops, surface rock, leaf litter and bark exfoliates;
- Monitored dismantling of identified microhabitats by fauna spotters with machinery assistance.

3. Wildlife Capture & Removal Plan

Relocation of native fauna is a strategy that may be required during the course of developmental works to up-hold the project's required nature conservation, animal welfare and human safety objectives.

In all circumstance where native fauna is required to be relocated it must be done so, or under the direct supervision of, a suitably licensed fauna spotter/catcher. A summary of the fauna capture, handling and relocations strategies to be implemented by the fauna spotter/catcher for fauna groups deemed likely, or possible, to occur on site are presented in *Table 2*.

Table 2: Fauna capture, handling and relocation strategy table

Animal Group	Capture and handling	Relocation	
Lizards Geckoes Dragons Monitors	 Place one hand behind the head at the base of the quadrates and the other at the base of the tail behind the hind limbs; Be cautious when handling smaller skinks and legless lizards as they may discard their tail; Lizards and geckoes can be placed inside suitably sized calico bags In the case of large monitor lizards keep the animal's ventral surface directly away from the body with the tail between the upper arm and torso. Dragons and small monitors can be placed in suitably sized calico bags. Larger monitors to be placed in suitably sized crate 	 Place the lizard head first into a suitable holding crate for later release. Dragons & monitors- release up trees or into heavy vegetation; Water dragons - in the vicinity of riparian areas; Skinks, Geckoes, Legless lizards - around creek margins. 	
Snakes	 Due to their mobile nature, large snakes generally do not require to be handled or relocated, with the exception of slow moving species (i.e. pythons) or smaller species; Snakes should be identified and only moved if competent and safe to do so (see SOP006 Handling Venomous Snakes Procedure); Do not attempt to catch a snake if you're not competent; Injured snakes should be handled with suitable equipment. 	 Release in suitable habitat e.g. along creek lines for python and tree snakes If feasible take them well away from clearance site to a suitable release location Release discreetly away from high density suburban areas 	
Small Mammals	 Place a gloved hand around the whole animal in the case of small mammals (melomys or rats), Do not handle rodents by the tail as this will cause damage to the tail sheath Place the animal in calico bag in a cool place for later relocation. Minimise holding time to avoid animal gnawing through bags and escaping 	Release animal into area suitable to its habitat requirements. Ensure plenty of cover is available.	

Animal Group	Capture and handling	Relocation
Glider Family	 Place gloved hands around the animal at initial capture; Place the glider(s) into a calico bag or suitable animal crate ensuring family groups are kept together for all inclusive release; Place in a cool dry area during the day. When using calico bags ensure the bag is hung and well ventilated Where possible contain gliders within hollow by plugging openings with a towel or calico bag 	 Release glider into habitat with natural hollows and canopy cover; When releasing a family group with more than one furred young (being carried on the back) either: Divide young between parents as a mother is unlikely to carry more than one young, Place young in elevated hollow with parents and allow them to move away in their own time. Place animal in bag at the base of the selected tree, opening the bag wide and allowing the animal to leave the bag when it is ready. Relocate hollow (with gliders inside) to suitable habitat and cover lightly with foliage so that the gliders can move away of their own accord and are protected from predators.
Amphibians	 Amphibians should be handled only when necessary and handling times should be kept to a minimum to help prevent: Removal of the protective mucous layer covering the skin of amphibians; To prevent handling stress induced by changes in their body temperature; Risk of spreading pathogens and parasites. Amphibians from different sites need to be kept isolated from each other, and need to be kept in different containers or bags; Any dead or sick amphibians need to be quarantined from other amphibians. Amphibians can be handled utilising one of the following methodologies: Bare handed – ensure hands are sterilized before handling and free from lotions, sunscreen etc Gloves – disposable gloves desirable or disinfect gloves between handling different animals; Plastic bags – Single use lightweight plastic bags can be used to pick up and handle frogs; again plastic bags should be disposed of before handling amphibians form a different site. All staff should be knowledgeable and familiar with the <i>Interim Hygiene Protocol for Handling Amphibians – Technical Manual (DEHP)</i> 	 Always ensure that amphibians are kept moist until release. This can include storing in a designated container with moist soil or toweling or in a wet calico bag; Release into suitable adjacent vegetation that is typical of the species requirements; Suitable release locations include riparian vegetation, low-lying wetlands, alongside creek lines, hollow logs, dams and ponds; Amphibians from different sites need to released in separate locations; Disinfection procedures in relation to amphibians need to be followed.

Animal Group	Capture and handling	Relocation	
Macropods	 Capture and restraint of macropods carries a high risk of injury and fatal hyperthermia/myopathy syndrome, and must not be performed by inexperienced personnel, or without appropriate equipment and sedation. Capture and restraint of healthy macropods (other than pouch young) must be performed using sedation or anaesthesia due to the high risk of developmental myopathy, and other capture and restraint-associated conditions. Sedative and anaesthetic drugs may only be used under direct supervision of a registered veterinarian, or by appropriately licensed persons (Hanger & Nottidge, 2009). 	 Release animal into suitable to its habitat requirements. Ensure plenty of cover is available. Macropods are to be released within the range of normal movement from their place of origin. E.g. a Kangaroo can be released within 100 km of its origin, based on its capacity to travel long distances. Monitor animals to ensure adequate recovery if sedated. 	
Microbats	 Only vaccinated persons are to handle bats If possible plug the hollow opening with a bag or towel and ask the operator to cut the hollow from the tree; Always wear gloves when handling bats. If not contained within a hollow, place bats inside a calico bag and hang upright in a cool place 	 Relocate hollow (with bats inside) to suitable habitat and cover lightly with foliage so that the bats can move away of their own accord and are protected from predators. Bats not contained within a hollow should be released as late as possible at the end of the day. 	
Possums	 Use thick elbow length gloves when handling possums; Try to grip the animal behind the head near the shoulder blades and around the tail so that you have control of the animal; Keep fingers away from the mouth of the animal; Keep the animal's body facing away at all times; Transfer into a thick calico bag and then into a kitty crate. Place in a safe and shady place until you can relocate the animal. 	 Release the possum into habitat with adequate hollows and cover; Place animal in bag at the base of a select tree, opening the bag and allow the animal to leave the bag when it is ready; When releasing a Ringtail Possum mother with more than one furred young (being carried on her back) it is unlikely that she will carry both young if highly stressed; Choose a smaller shrubby tree with vines or heavy foliage (so the adult can construct a drey easily) Watch the adult ascend the tree, it is possible she will only carry one young and so any additional young may be pushed from her back It may be necessary to take one or more of the young to a wildlife carer If possible place mother and young in a suspended hollow, cover lightly with foliage and allow the animals to move on their own accord. This way the mother can ferry young one at a time to a more suitable location. 	

Animal Group	Capture and handling	Relocation	
Birds	 Use gloves when handling larger birds Use a towel to cover the bird and simultaneously restrain the bird and transfer into calico bag With larger parrots and raptors, restrain head and legs and transfer into a kitty crate Wrap chicks loosely in a towel and transfer to kitty crate, keep in a warm location. 	 Relocate adult birds in suitable habitat Chicks should be referred to wildlife carer 	
Koalas	Movement of Koalas is heavily legislated in South East Queensland. Koalas are not to be captured or relocated without the prior consent of Department Environment an Natural Resource Management (DERM). Koalas should be left to move away of their own volition and trees are not to be felled while a Koala remains in occupancy. Se SOP003 Koala Management Procedure for further information.		

4. Wildlife Contingency Plan

In the event sick, injured or orphaned protected animals are encountered during the course of the project they shall be administered to in accordance with the *Code of Practice Care of Sick, Injured or Orphaned Protected Animals in Queensland* under the *Nature Conservation Act 1992*.

The stages in which injuries or illness are described under the code are as follows:

Critical: Injuries or illnesses that are life-threatening; for example, an animal that has been struck by a car and has serious head injuries.

Serious: Injuries or illnesses that might reasonably be expected to cause moderate pain (but are not immediately life-threatening), and the animal is not showing obvious signs of distress or pain, or significantly reduced mental activity; for example, an animal with a closed fracture but no other apparent injuries and that is alert and responsive.

Mild: The injuries or illness of an animal appear to cause little discomfort, pain or function loss and are not life-threatening (even without immediate vet treatment); for example, superficial cuts, superficial bruising or orphaned animals suffering from mild dehydration.

4.1 Basic Wildlife Care

If wildlife requiring care are encountered by the fauna spotter/catcher they will be attended to in the manner set out by the guidelines provided in *Table 4*. Supplementary advice will be sought from a wildlife carer and/or veterinarian where required. QFC have previously utilised experienced local carer groups and vets. These are listed in Table 3.

Table 3: List of Local Vets & Wildlife Carer Groups

Table 4: Basic Wildlife Care

Birds	Reptiles & Amphibians	Mammals
Egg Viable eggs must be kept warm until	Egg Viable eggs must be kept warm and	Neonate Unfurred animals need to be kept warm
transferred to a suitable wildlife carer. It is necessary that the orientation of the eggs be maintained as fixed embryos may be lost. Keep wrapped in a pouch and on a heat source (where available). An ideal temperature is between 25-27° (DEHP 2013); where possible attempt to identify the species so the carer can be informed as the management of eggs can vary in accordance with species and stage of development.	stable until transferred to a wildlife carer. It is necessary that the orientation of the eggs be maintained as fixed embryos may be lost. Keep wrapped in pouch or towel and place into an animal crate in a safe location.	until transferred to a carer. Place into a pouch and onto a heat pad. Ideal temperature is between 31-34°. 25-27° is appropriate in most other cases (DEHP 2013). Regularly check the animal to ensure it is not overheating by observing for obvious signs of distress (i.e. panting, very warm to the touch, red blotched skin). Adjust the temperature where required. Seek further advice from the carer if you are unsure.
Chick	Juvenile	Juvenile
Make sure the animal is correctly identified as different species often have very different requirements. Place chicks into a pouch/towel onto a heat source maintained around 31-34° (only if they have not fledged) and keep in an animal crate until transferred to a carer.	Place animals in a suitable lined crate and keep covered in a dark quiet place. Refer to the wildlife contact list in your QFC Folder for a carer who specialises in reptiles.	Place into a lined crate and keep covered in a dark and quiet location.
Adult	Adult	Adult
Keep adult birds in a lined animal crate or cage and covered in a quiet area.	Place animals in a suitable lined crate and keep covered in a dark quiet place. Refer to the wildlife contact list in your QFC Folder for a carer who specialises in reptiles.	Place into a lined crate and keep covered in a dark and quiet location.
Feeding	Feeding	Feeding
Providing food and water is generally not required during short periods (2-3 hrs) though this should be reconsidered if animals need to held longer. Consult the vet and/or carer for further advice on how to proceed.	Newly hatched reptiles may require feeding if kept overnight. Consult with QFC for further advice. Snakes and turtles will not require feeding but water should be made available.	Providing food and water is generally not required during short periods (2-3 hrs) though this should be reconsidered if animals need to be held longer. Consult the carer for further advice on how to proceed.

4.2 First Aid

Animals suffering from serious injuries or illness encountered on the project should be passed on to veterinary care as soon as possible. In the interim a licensed fauna spotter/catcher can provide first aid for the animal and organise suitable transportation.

If a seriously sick or injured animal is encountered the fauna spotter/catcher should:

- 1. Keep the animal calm by placing into an animal crate and keeping it covered in a dark and quiet location. Isolate any nearby threats such as domestic animals or predators.
- 2. Quickly and thoroughly inspect the animal for trauma. If the injuries are not serious enough to require euthanasia administer the basic first aid as a minimum (but only if capable to do so)

Representative first aid that may be administered by a fauna spotter/catcher is provided in *Table 5*.

Table 5: Wildlife First Aid

Ailment	First Aid		
Bleeding	Using material that is clean and sanitary, apply direct pressure to the affected area. Bandages can be used to hold material in place until vet treatment can be sought. Veterinarian treatment should be sought for further assistance as soon as possible.		
Broken limbs	House the animal in a suitably sized animal crate with towels under the animal for comfort. Keep the crate covered and in a quiet location. Proceed to a veterinarian for further assistance as soon as possible.		
Injured tails	House the animal in a suitably sized animal crate with towels under the animal for comfort. Keep the crate covered and in a quiet location. Proceed to a veterinarian for further assistance as soon as possible.		
Concussions	House the animal in a suitably sized animal crate with towels under the animal for comfort. Keep the crate covered and in a quiet location. Proceed to a veterinarian for further assistance as soon as possible.		

4.3 Euthanasia

Section 12 of the code details how to determine when euthanasia is required and how to euthanise animals ethically. The following standards as listed under the code are to be followed when assessing whether euthanasia is required:

- The euthanasia of wildlife where required is to be provided for by all wildlife rehabilitators;
- Euthanasia without exception is to be carried out when:
 - Significant pain or suffering is to be alleviated where it is not able to be managed by a vet;
 - Further treatment is **not** practical or recovery is **not** expected in a way in which the animal can be successfully rehabilitated back to the wild;
 - Resources are not available to provide appropriate care or an acceptable quality of life throughout the likely rehabilitation period.
- Animals that are suffering and have a poor prognosis for survival must be euthanised rather than left to die from the injury or illness. Failure to undertake appropriate action is a breach of the Animal *Care and Protection Act 2001*.
- Unless permission has been granted by the Department of Environment and Heritage Protection for the animal to enter the Queensland Species Management Plan (QSMP) or otherwise advised by the DEHP Wildlife Management Director, animals must be euthanised when:
 - o An orphaned animal is not viable or likely to be rehabilitated;
 - No suitable release locations are available;
 - The ability for an animal to reproduce is lost due to an injury, disease or surgical procedure;
 - The ability to move freely or normally (i.e. run, climb, crawl, hop, fly or swim) is permanently impaired. Examples are: a missing or impaired limb, wing, foot or tail that would significantly impair the animal's ability to survive in the wild;
 - The ability to sense environment (i.e. see, smell, fell, taste or hear) is permanently impaired. For example: missing or injured organ such as an eye, ear or nose that would significantly impair the animal's ability to survive in the wild;
 - The ability to catch, find or handle food is permanently impaired;
 - o Its advanced age renders it unlikely to survive in the wild.

Wildlife Storage & Housing Plan

For wildlife requiring storage, temporary housing and transportation to release sites and/or to a wildlife carer or veterinarian, guidelines set out in the Code of Practice and QFC's Animal Ethics Permit will be followed.

Dependent on the species of animal and condition of the animal, temporary storage and housing of animals will be as follows:

Calico bags: Calico bags will be used to temporarily house fauna such as snakes, lizards and small mammals (including microbats), Bags will range in size from 200mm x 200mm to 600mm x 1800mm. Bag selection will vary according to the size of animals to be placed in them. In the case of snakes a "hoop bag" may be used to facilitate capture. The hoop is approximately 500mm in diameter attached to a handle. The bag is placed around the hoop ensuring a greater area in which to pass the snake through into the bag.

Plastic holding tubs/containers/animal crate: Plastic holding tubs/containers/crates will be used to temporarily house fauna such as snakes, lizards, frogs, small mammals and birds (Plastic holding tubs/containers/crates will range in size from 150mm x 150mm x 120mm to 500mmx 400mm x

400mm. Plastic holding tubs/containers/crates selection will vary according to the size and number of animals to be placed in them.

In addition to this, material is used to line the tub/crate to ensure the animals won't lose its footing. This may include folded towels on the bottom of the crate or a fitted pad. These items are washed between each use to reduce the spread of disease/parasites.

Section 9 of the Code relates to how transportation of wildlife should be undertaken. The following will be adhered to when transporting wildlife to the vet and/or carer:

- Additional pain or distress of the animal is to be avoided;
- Wildlife should only be transported when necessary;
- Transport containers must be appropriate for the species (size, strength and behaviour of species being moved;
- Transport containers must be designed and maintained in a way as to:
 - Prevent injury;
 - Prevent escape;
 - Prevent rolling/tipping during transit;
 - Prevent damage to plumage (feathers);
 - o Be hygienic;
 - Minimise stress and
 - Be suitably ventilated.

- Non-compatible species must not be transported in a manner which allows for visual or physical contact;
- Containers must be secured to prevent movement and provide protection from direct sunlight, wind and rain;

Venomous, dangerous or potentially disease transmitting animals must be clearly marked with warning labels (i.e. Caution –'venomous snake' or 'live bat') and be locked and secured.

6. Wildlife Release & Disposal Plan

Spring Mountain Forest Park lies to the south of Village 8 and contains similar habitat types suitable for species likely to be encountered when clearing.

With the exception of highly mobile species such as birds and macropods where natural relocation may occur, it will be necessary for the fauna spotter/catcher to translocate the majority of fauna found into suitable habitat within these areas. A map of the intended release site can be viewed in Appendix B

In regard to all fauna capture and disposal activities conducted on the project the following records will be made:

- a. species;
- b. identification name or number;
- **c.** sex (M, F, or unknown);
- **d.** approximate age or age class (neonate, juvenile, sub-adult, adult);
- e. time and date of capture;
- f. method of capture;
- g. exact point of capture (GPS point);
- **h.** state of health;
- i. incidents associated with capture likely to affect the animal;
- j. veterinary intervention or treatments;
- **k.** time held in captivity;
- I. disposal (euthanasia, re-release, translocation etc);
- m. date and time of disposal;
- **n.** details of disposal (if released, exact point of release GPS);
- **o.** for released animals: distance in metres from point of capture to point of release.

7. Post Works Impact Minimisation

As the project area will be cleared of all vegetation, post works impact monitoring and/or impact minimisation is deemed not necessary. It is unlikely the vast majority of wildlife will return to the area as all habitat and foraging resources will be removed and habitat connectivity is also not present.

In the event that fauna is found on site post-works, it is recommended personnel contact QFC and a licensed and experienced wildlife consultant can be dispatched to remove and relocate the animal should it be necessary. QFC wildlife consultants are available 24/7 for fauna related call-outs in relation to this project.

It is recommended that if any fauna, such as Kangaroos and Wallabies, are noted in the wider area and appear distressed post-works that QFC be contacted to further assess the situation.

8. Assessment, Conclusion and Fauna Management Recommendations

A number of conclusions and recommendations are presented, with the specific intention of providing a comprehensive management structure to facilitate minimal impact to fauna during the clearing of vegetation and subsequent disturbance of habitats. The directives given by Fauna Spotter Catchers should embrace a "best practice" approach which includes implementation of proven specific management techniques for identified habitat types and compliance with legislation relevant to the activity.

Fauna management is presented here specific to EVNT fauna, general terrestrial and arboreal fauna and aquatic fauna. Although each is treated separately, overlap does occur within target techniques providing a comprehensive approach for target species of all conservation significance.

1. Introduction

1.1 Project Background

Queensland Fauna Consultancy Pty Ltd has been engaged by Shadforths Civil Contractors to conduct a Fauna Spotter Catcher Pre-clearance and Habitat Values Survey and present a subsequent report for Village 15 of the Springfield Rise development proposed at Spring Mountain, Queensland. A survey was undertaken on the 9th March 2017, however QFC were requested by Shadforths Civil Contractors to undertake an additional site survey. This was due to the period of time that had elapsed since the initial survey and the proposed commencement of clearing. The site location with indicative site extent is presented in Map 1.

The objective of this report is to summarise the existing fauna values present and assign mitigatory strategies applicable to probable species likely to be encountered during the clearing of identified habitats throughout or within specific localities of the site. Fauna species both common and of elevated conservation value have been considered within the parameters of onsite investigations and, where provided to QFC, include review of current fauna and floristic reports that may influence the assemblages expected to utilise the micro habitats evident within the site.

This review encompasses species identified under the provisions of the Commonwealth *Environment Protection and Biodiversity Conservation Act 1999* and the Queensland *Nature Conservation Act 1992*. Further consideration is given, where applicable, to species of iconic, cultural and/or regional significance identified under commonwealth, state or local planning instruments aimed at the persistence of biodiversity values within the area.

1.2 Project Location and Site Description

Village 15 is located in the central portion of the Springfield Rise precinct, and, in conjunction with Villages 11, 12 and 13 and 14, defines the key intersection of the Grand Avenue extension and the Major Collector linking into the Town Centre. Village 15 is will adjoin a wildlife/vegetation corridor along the western boundary.

Existing features exhibit primarily a woodland vegetative complex with drainage features present due to an undulating topography. Dominant trees species across several vegetation types include *Eucalyptus, Corymbia, Angophora* and *Lophostemon* species.

Map 1: Project Location

(Image extracted from Springfield Rise at Spring Mountain Concept Masterplan, LandPartners 2016)

1.3 Current Permits and Authorities

All activities conducted during the site investigations were implemented under the provisions of a number of permits issued to Queensland Fauna Consultancy Pty Ltd by the Department of Environment and Heritage Protection (DEHP) formerly the Department of Environment and Resource Management and the Department of Employment, Economic Development and Innovation (DEEDI). These permits and additional authorities are listed in Table 1.

Table 1: Current Permits and authorities issued to QFC

Permit/Authorisation	Permit Number	Expiry Date
Damage Mitigation Permit	WIMP17840916	5 th December 2019
Rehabilitation Permit	WIRP15052614	10 th September 2017
Scientific Purposes Permit	WISP16935816	14 th February 2021
Scientific User Registration	Registration Number 589	27 th February 2019
Animal Ethics	CA 2016/01/939	27 th February 2019

These permits and approvals enable QFC to conduct the investigation, observation and relocation of protected animals exposed to disturbance due to infrastructure expansion resulting in the destruction of natural and artificial habitats.

2. Methodology

An initial site inspection was carried out on 9th March 2017, with a follow up survey conducted on the 26th April 2017 by Qld Fauna Consultancy. A standard set of observational techniques aimed at maximising the detection of fauna and the probable habitats they may occupy were employed to ascertain and identify the current fauna values throughout the project area. Where species of elevated conservation significance where foreseen as potentially present targeted searches were instigated to further evaluate individual species habitat.

Due to the habitat variability expressed across the development site the composition of investigations may include a range of features that entail specific components indicative of the presence of particular species or faunal groups. This may include, where evident, observation of activity or signs of both historical and current use.

These may include but are not limited to the following:

- Identification of terrestrial microhabitats such as ground hollows, rock, burrows, leaf litter, stands of heavy vegetation, fallen branches and bark exfoliations;
- Identification of arboreal micro habitats including basal, trunk and limb hollows, tree fissures, bark exfoliates and arboreal termitaria;
- Identification of constructed arboreal micro habitats including bird nests and Ringtail Possum dreys;
- Artificial habitats including but not limited to ornamental gardens, discarded rubbish, human dwellings and other infrastructure;
- Observation and investigation of aquatic habitats including dams, soaks, creeks, rivers and seasonally inundated vegetation communities. Artificial aquatic habitats may include constructed drains and culverts. Further components of interest include bank profiles and undercuts, submerged and/or exposed timber and rock, immediate aquatic and riparian vegetation, surfacing animals, nesting and/or feeding birds;
- Direct observation of active or exposed fauna within terrestrial, aquatic and arboreal habitats;
- Identification of scats, tracks and scratchings to determine fauna potentially present or to have historically utilised the site for either transient or longer term life history purposes.

2.1 Specific methodology for Koalas *Phascolarctos cinereus*

Due to specific requirements and the cryptic nature of the Koala the following techniques were employed to assist in ascertaining the current and historical presence/absence status of the species at the site:

- Use of binoculars to inspect the crown, forks and trunk of trees for individuals currently occupying the site;
- 'Drip zone' searches at the base of known food trees for the presence of scats to a radius equal to that of the crown of individual trees;
- Inspection of trunks for scratchings indicative of use by Koalas.

3. Findings

The findings endeavor to demarcate the existing habitat profiles and the features present into three distinct groups: terrestrial, arboreal and aquatic. All habitat features present onsite are noted, however it is probable additional features will be present with these being accounted for during the Fauna Spotter Catcher process to be applied to all vegetation clearing across the site.

3.1 Terrestrial Habitat Features

The terrestrial fauna values of the site consist of a variety of different components and microhabitat features. These features include an understorey composed of a variety of plant species, with areas exhibiting sparse to moderate vegetative cover (Figure 1 and Figure 2) and other areas displaying dense cover provisioned by a variety of grass and shrub species including Blady Grass *Imperata cylindrical*, Quinine Bush *Petalostigma pubescens*, Lantana *Lantana camara* (introduced), Soap Tree *Alphitonia excelsa* and *Acacia* spp. (Figure 3).

Leaf litter and bark exfoliations (Figure 4) are also a feature on site, being present in abundance and at variable depths, providing refugial opportunities and microhabitat connectivity that can be exploited by many different native terrestrial vertebrate and invertebrate species. The site is also exhibitive of a large amount of ground timber, woody debris and hollow logs (Figure 5, Figure 6 and Figure 7).

Rocky ridges exhibiting boulders and scattered surface rocks are also present in several localities further adding to the sites potential habitat value for small reptiles and amphibian species (Figure 8 and Figure 9).

Terrestrial termite mounds (Figure 10 and Figure 11) also featured throughout the site, and are readily exploited by Lace Monitors *Varanus varius* for nesting opportunities; in addition to being utilised as a foraging resource by other fauna such as blind snake species and the Short-beaked Echidna *Tachyglossus aculeatus*.

Mammal assemblages may comprise both native and introduced species. Potential native mammals occurring on site include the Northern Brown Bandicoot *Isoodon macrourus* which may be present in localities with significant vegetative ground cover. Small conical burrows indicative of this species were also observed in several localities (Figure 12).

These features collectively contribute to the potential presence of a wide variety of native fauna species utilising the area for refugial, foraging and other resources.

GPS coordinates for all indicative terrestrial habitat features are shown in Table 2. Localities for identified terrestrial habitat features are presented in Map 2. Those habitat features identified during the March survey were validated during the April survey (refer to Table 2), and any additional features recorded.

A comprehensive list of fauna species recorded in the region can be viewed in Appendix C.

3.2 Arboreal Habitat Features

The majority of the clearance area consists predominately of Eucalypt woodland exhibitive of trees of varying height, species and density. The intermittent contiguous canopy structure within the vegetation represented may be facilitative of arboreal progression for species such as Brushtail Possum *Trichosurus vulpecula* and Common Ringtail Possum *Pseudocheirus peregrinus*. Fauna scratches indicating arboreal mammal and reptile activity were found on numerous tree trunks (Figure 13).

Arboreal termite mounds are present on site (Figure 14) and constitute a feeding and nesting resource for a number of native species. Species such as the Lace Monitor *Varanus varius* utilise arboreal termitaria for egg deposition and long term incubation. Suitable mounds were located with the potential for use by this species.

Hollow bearing trees and stags (Figure 15 and Figure 16) feature throughout the site, and are augmented by the presence of a number of installed habitat boxes (Figure 18). Four of these boxes (Microbat, Glider, Possum & Parrot) were previously moved from Village 13 during clearing in November. One box (Glider) contained 3 Adult Squirrel Gliders *Petaurus norfolcensis* (1 with pouch young) when relocated. The other boxes contained no fauna at the time if re-installation. These provide habitat opportunities for a number of bird and arboreal mammal species. No avian stick nests or Possum dreys were found during either of the surveys, however further inspections are recommended immediately prior to clearing commencement.

A number of trees present were also exhibitive of exfoliating bark (Figure 17), a feature that may provide refugial opportunities for reptile species such as arboreal snakes and geckos.

GPS coordinates for all indicative arboreal habitat features are shown in Table 3. Localities for identified arboreal habitat features are presented in Map 3. Those habitat features identified during the March survey were validated during the April survey (refer to Table 3), and any additional features recorded.

Koala habitat trees located in the clearance area include *Eucalyptus propinqua*, *E. seeana*, *E. siderophloia*, *E. carnea*, *E. crebra*, *E. tereticornis*, *E. fibrosa*, *E. microcorys*, *E. grandis*, *E. cloeziana Corymbia intermedia*, *C. citriodora variegate*, *C. tessellaris*, *C. trachyphloia*, *Angophora leiocarpa* and *Lophestemon suaveolens*. However, no evidence was observed to indicate recent use of these trees by koalas. No koala scats were found during 'drip zone' searches and characteristic scratchings were not found during trunk investigations. A Koala habitat values map for the clearance area is presented in Appendix A.

Table 3: Localities for identified arboreal habitat features

Nicoshau	Number Habitat Feature Easting Northing		Habitat	
Number			Northing	Feature still Valid?
1	Arboreal termitaria	0489145	6937715	Yes

3.3 Aquatic Habitat Features

Due the undulating topography several gullies are present on site (Figure 19). Subject to climatic events, these gullies would act as ephemeral drainage features and may provide breeding opportunities for frogs during significant rainfall events when intermittent ponded features are created. No pooling of water was observed at the time of either of the surveys. A number of native species may exploit the various microhabitats present by these environmental features, particularly during times of rainfall, including Graceful Treefrog *Litoria gracilenta*, Keelback Snake *Tropidonophis mairii* and various mammals and birds as a water resource.

Figure 19: Drainage feature

3.4 Endangered, Vulnerable and Near Threatened (EVNT) Species

It is not envisaged that any EVNT fauna species will be detrimentally impacted by the proposed works. However, seven species identified within the Online EPBC Protected Matters Report and the Queensland Government Wildlife Online Search Tool were present or considered likely or possible to occur within the site and will require further mitigation during clearing activities. Rufous Fantail *Rhipidura rufifrons*, listed migratory and marine under EPBC, were observed within the clearance area at the time of the survey.

Although no evidence was found during the site inspection of very recent Koala use, the species has previously been recorded in the area. Some areas within the site are identified as High Value Bushland under Koala Habitat in South East Queensland mapping sourced from the DEHP online search tool (see Appendix A). It is advised that dedicated methodologies be employed by a qualified Fauna Spotter specific to the detection of these species prior to vegetation clearing activities.

Table 4: Significant species deemed present, likely or possible to occur within the clearance survey area

Common Name Scientific Name	Species Information	Likelihood of Occurrence within the Clearance Survey area
Mammals		
Koala Phascolarctos cinereus EPBC: Vulnerable NCA: Vulnerable	Inhabits a range of open forest and woodland communities which may include any of the following noted food trees: Eucalyptus, Corymbia, Melaleuca, Angophora and Lophostemon.	Likely Known food trees for the transient Koala (Phascolarctos cinereus) occur on the clearance site and the species is well documented within the area.
Grey-headed Flying-fox Pteropus poliocephalus EPBC: Vulnerable NCA: Least Concern	The Grey-headed Flying-Fox roosts in aggregations of various sizes on exposed branches, commonly of emergent trees. Roost sites are typically located near water, such as lakes, rivers or the coast. Habitat includes open forests, woodlands, urban parks and gardens.	Possible Suitable vegetation communities containing both feeding and roosting resources occur on and adjacent to the clearance site.
Spotted-tail Quoll (SE Mainland Population) Dasyurus maculates maculatus EPBC: Endangered NCA: Vulnerable	Currently known from the Granit Belt and Border Ranges though small numbers may occur from Gympie to the QLD border (Curtis <i>et al.</i> 2012). Inhabits vine-forest, wet and dry sclerophyll forests and woodlands containing boulder piles, fallen logs and hollow trees utilised as shelter sites (Curtis <i>et al.</i> 2012).	Possible Preferred habitat type and habitat features present and the species is documented within the area.

Greater Glider Petauroides volans EPBC: Vulnerable NCA: Least Concern	Largest of the gliders, the Great Glider is found along eastern Australia within a variety of eucalypt dominated forests and tall open woodlands (Lindenmayer 2002)	Possible Preferred habitat type and habitat features present and the species is documented within the area.
Birds		
Powerful Owl Ninox strenua EPBC: Not Listed NCA: Vulnerable Rufous Fantail Rhipidura rufifrons EPBC: Migratory and Marine NCA: Special Least Concern	Inhabits forests and woodlands of eastern and south-eastern Australia (Beruldsen 2003). Breeds once per year in May to July or August. Nests in hollow trunks or limbs of large trees, usually at considerable height (Beruldsen 2003). The Rufous Fantail builds a small compact cup nest, of fine grasses bound with spider webs, that is suspended from a tree fork about 5m from the ground. The bottom of the nest is drawn out into a long stem. Both sexes share nest building, incubation and feeding of the young. One or two broods may be raised in a season (Serventy, 1982).	Preferred habitat types present and the species is documented within the area. Present Preferred habitat types present and the species was observed within the area during the inspection.
Reptiles	Breeding occurs from about September to February with 81% of eggs laid in November-December (Higgins <i>et al.</i> 2001).	
Collared Delma Delma torquata EPBC: Vulnerable NCA: Vulnerable	Weathered loose rocks, flattish bedrock outcroppings, logs or mats of leaf litter, or in cracks and crevices among tussock grasses. Lays two eggs around December with hatching in February or March (Curtis <i>et al.</i> 2012)	Possible Preferred habitat type and habitat features present.

4. Fauna Impacts

It is important to consider the existing and future residential developmental areas when investigation potential fauna impacts.

Impacts to fauna as a result of vegetation clearance will include the following:

- Loss of trees for foraging, roosting and nesting;
- Loss of hollow-bearing trees for nesting and refuge;
- Loss of habitat and foraging areas for terrestrial species;
- Loss of overall habitat;
- Potential loss of abundance of some local species.

Other impacts may include:

- Injury or death during felling of trees;
- Injury or death from machinery;
- Alteration of nesting, foraging and general activities due to disturbance.

5. Assessment and Conclusion

Overall the site contains medium value refugial opportunities for arboreal and terrestrial fauna species (see Section 3.1 and 3.2). The species expected within the site are likely to primarily reflect common fauna assemblages for the region; however, provisions will be proposed directly for common fauna and species of conservation significance.

The current retention of habitat to the south and west of Village 15 in conjunction with sequential clearing methodologies will aid in the movement of medium to large size fauna such as Koala and Kangaroos. Specific methodologies for these species will be detailed within the Wildlife and Habitat Impact Mitigation Plan (WHIMP).

A number of conclusions and recommendations will be presented in the WHIMP, with the specific intention of providing a comprehensive management structure to facilitate minimal impact to fauna during the clearing of vegetation and subsequent disturbance of habitats.

It is advised that all identified fauna habitats onsite be inspected by a DEHP approved Fauna Spotter prior to vegetation clearing and all vegetation removal activities be supervised during the clearing process. Terrestrial load reduction activities will be conducted ahead of the clearing front where possible. Fauna captured will be relocated to adjacent habitat consistent with the life history requirements of the species requiring translocation. The directives given by Fauna Spotter Catchers should embrace a "best practice" approach which includes implementation of proven specific management techniques for identified habitat types and compliance with legislation relevant to the activity.

It is recommended that in the event any nests which contain chicks are identified during clearing be left until fledged, and those that are in a construction phase should be dismantled to prevent further nesting activity. Any fertile eggs recovered will require incubation and subsequent rearing for latter release.

Further recommendations are made for the salvage of the habitat boxes present where possible, and re-instated after the conclusion of clearing within adjacent vegetation away from further proposed development.

8. Appendix B: EPBC Act Protected Matters Report

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected.

Information on the coverage of this report and qualifications on data supporting this report are contained in the caveat at the end of the report.

Information is available about <u>Environment Assessments</u> and the EPBC Act including significance guidelines, forms and application process details.

Report created: 09/03/17 14:33:12

Summary

Matters of National Environmental Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the <u>Administrative Guidelines on Significance</u>.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance:	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Commonwealth Marine Area: Listed Threatened Ecological Communities:	None 2
	None 2 36

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at http://www.environment.gov.au/heritage

A <u>permit</u> may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Land:	1
Commonwealth Heritage Places:	1
Listed Marine Species:	20
Whales and Other Cetaceans:	None
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Commonwealth Reserves Marine:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have nominated.

State and Territory Reserves:	1
Regional Forest Agreements:	None
Invasive Species:	32
Nationally Important Wetlands:	1
Key Ecological Features (Marine)	None

Commonwealth Land		[Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Extra Information

State and Territory Reserves	[Resource Information]
Name	State
White Rock	QLD
Invasive Species	[Resource Information]

Weeds reported here are the 20 species of national significance (WoNS), along with other introduced plants that are considered by the States and Territories to pose a particularly significant threat to biodiversity. The following feral animals are reported: Goat, Red Fox, Cat, Rabbit, Pig, Water Buffalo and Cane Toad. Maps from Landscape Health Project, National Land and Water Resouces Audit, 2001.

Name	Status	Type of Presence

Eichhomla crassipes	
Water Hyacinth, Water Orchid, Nile Lily [13466]	Species or species habita likely to occur within area
Genista monspessulana	
Montpellier Broom, Cape Broom, Canary Broom, Common Broom, French Broom, Soft Broom [20126]	Species or species habita likely to occur within area
Lantana camara	
Lantana, Common Lantana, Kamara Lantana, Large- leaf Lantana, Pink Flowered Lantana, Red Flowered Lantana, Red-Flowered Sage, White Sage, Wild Sage [10892] Parkinsonia aculeata	Species or species habita likely to occur within area
Parkinsonia, Jerusalem Thom, Jelly Bean Tree, Horse Bean [12301]	Species or species habita likely to occur within area
Parthenium hysterophorus	
Parthenium Weed, Bitter Weed, Carrot Grass, False Ragweed [19566]	Species or species habita likely to occur within area
Sallx spp. except S.babylonica, S.x calodendron & S.x rei	chardtil
Willows except Weeping Willow, Pussy Willow and Sterile Pussy Willow [68497]	Species or species habita likely to occur within area
Salvinia molesta	
Saivinia, Giant Saivinia, Aquarium Watermoss, Kariba Weed [13665]	Species or species habita likely to occur within area
Senecio madagascariensis	
Fireweed, Madagascar Ragwort, Madagascar Groundsel [2624]	Species or species habita likely to occur within area
Solanum elaeagnifolium	
Silver Nightshade, Silver-leaved Nightshade, White Horse Nettle, Silver-leaf Nightshade, Tomato Weed, White Nightshade, Bull-nettle, Prairie-berry, Satansbos, Silver-leaf Bitter-apple,	Species or species habita likely to occur within area

Name	Status	Type of Presence

Caveat

The information presented in this report has been provided by a range of data sources as acknowledged at the end of the report.

This report is designed to assist in identifying the locations of places which may be relevant in determining obligations under the Environment Protection and Biodiversity Conservation Act 1999. It holds mapped locations of World and National Heritage properties, Wetlands of International and National Importance, Commonwealth and State/Territory reserves, listed threatened, migratory and marine species and listed threatened ecological communities. Mapping of Commonwealth land is not complete at this stage. Maps have been colleted from a range of sources at various resolutions.

Not all species listed under the EPBC Act have been mapped (see below) and therefore a report is a general guide only. Where available data supports mapping, the type of presence that can be determined from the data is indicated in general terms. People using this information in making a referral may need to consider the qualifications below and may need to seek and consider other information sources.

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans. State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species distributions have been derived through a variety of methods. Where distributions are well known and if time permits, maps are derived using either thematic spetial data (i.e. vegetation, soils, geology, elevation, espect, terrain, etc) together with point locations and described habitat, or environmental modelling (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where very little information is available for species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilomatre grid cells, alpha-hall and convex half); or captured manually or by using topographic features (national park boundaries, stands, etc). In the early stages of the distribution mapping process (1990-early 200%) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly creete distribution maps. More reliable distribution mapping methods are used to update these distributions as time permits.

Only selected species covered by the following provisions of the EPSC Act have been mapped:

- migratory and
- marine

The following species and ecological communities have not been mapped and do not appear in reports produced from this database:

- Streatened species listed as extinct or considered as vagnents
- some species and ecological communities that have only recently been listed
- some terrestrial species that overfly the Commonwealth marine area
- migratory species that are very widespread, vagrant, or only occur in small numbers

The following groups have been mapped, but may not cover the complete distribution of the species:

- non-threatened seabirds which have only been mapped for recorded breeding sites
- sees which have only been mapped for breeding sites near the Australian continent

Such breeding sites may be important for the protection of the Commonwealth Marine environment.

CODES

- I Y indicates that the taxon is introduced to Queensland and has naturalised.
- Q Indicates the Queensland conservation status of each taxon under the Nature Conservation Act 1992. The codes are Extinct in the Wild (PE), Endangered (E),
 Vulnerable (V), Near Threatened (NT), Least Concern (C) or Not Protected (I).
- A Indicates the Australian conservation status of each taxon under the Environment Protection and Biodiversity Conservation Act 1999. The values of EPBC are Conservation Dependent (CD), Critically Endangered (CE), Endangered (E), Extinct (EX), Extinct in the Wild (XW) and Vulnerable (V).

Records - The first number indicates the total number of records of the taxon for the record option selected (i.e. All, Confirmed or Specimens).

This number is output as 99999 if it equals or exceeds this value. The second number located after the / indicates the number of specimen records for the taxon. This number is output as 990 if it equals or exceeds this value.

Daniel,

Receipt of the pre-start documentation and supporting advice undercover of your email dated 28 April 2017 is acknowledged. Given the ongoing nature of the Lend Lease development and that there is no change in parties

involved, a formal joint pre-start meeting is not required in this instance. However, it is requested that the Spring Mountain Layout Plan mentioned in earlier correspondence be provided.

Regards,

Mark Dillon | Technical Officer (Engineering)

Subject: 5902/2016/ADP - Springfield Rise Village 15 2.6 Pre Start Meeting Request

RE: 5902/2016/ADP

Hi Mark

We would like to request a Pre Start meeting with ICC for next week for the Village 15 2.6 approval vegetation clearing and earthworks associated with the above approval.

Are you able to advise whether a pre-start is required for these works and if so confirm a time next week that would suit.

<u>In accordance with Condition 7 (a) I have attached the relevant requirements as specified by ICC PSP 3 Section 5 in</u> relation to the Pre Start:

- Signed Nomination of Responsibilities Form;
- Project Contact List (MS Word and PDF formats);
- Insurance Certificates from the Contractor (Workcover CoC attached only. The existing PL CoC only insures up until 28/2/17. The extended CoC will be issued for your records in the coming days);
- Proof of Appointment of Contractor (email direction from Lend Lease); I have request the same advice provided by Cardno for Village 12 be sent to you. Pending.
- Erosion & Sediment Control Management Plan Clearing Phase (a copy of the bulk earthworks phase ESCMP will be provided to council prior to commencing bulk earthworks operations).

Please note Lend Lease have a rolling bond in place to cover the ESC bonding requirements of Section 5.2.2 (1) (d).

External site signage is in place for the overall construction site which complies with Section 5.2.2 1 (e).
